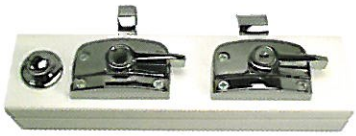
Sash Windows

Safety

An optional opening restrictor is available to limit the opening aperture of our windows. This is often termed a child restrictor and provides extra safety.



Period Detail

Period details include optional decorative horns on the top sash, brass, black or chrome effect hardware and traditional sightlines with a deep bottom rail.

Glazing Bars

Decorative glazing bars are available either within the glass (glazed in) or, for the full georgian effect, can be applied to both sides of the double glazed unit (authentic).

Style

Most window styles can be produced or replicated including arched head frames and bay windows.

Tilt Option

By making the most of modern design and materials, the window can be made so that one or both sashes, tilt inwards. This helps with ventilation and cleaning.

Balances

All windows are supplied with pre-tensioned balances fully installed to match the weight and size of the sashes enabling them to glide effortlessly.

All details are subject to change due to continuous improvement. Colours may vary from those shown.
