**Flag Status:** Flagged

Hi Peter,

I am happy to say that no noise assessment would be required. No external plants or heavy machinery - I can't imagine it will be too much of an issue.

Many thanks

Hi Peter

I thank you for your email. The work will be the repair of small boats as they undertake at present.

With regard to deliveries car movement etc., there will be no more than the current situation. The provision of the building will be to allow work to carry on in inclement weather rather than standing around or having to move to other work out of order.

There will be no external machinery and the only machinery at all, will be small hand tools. This will in fact reduce such noise as there is because it will be inside.

Kind regards Steve

Hi Stephen

Thanks for your email. I have a few more questions I'm afraid. Do you know what types of work will be undertaken and will there be a need for any external plant? What machinery will be used? Do you know what type of vehicles will need to access the site and their frequency for deliveries, etc?

I visited the site last week and spoke with the applicant who mentioned that he would be using tools in connection with boat building and repairs but I am trying to ascertain what noise is likely to be created and what controls may need to be imposed.

Thanks

Hi Peter

Thanks for your email. The weight is no problem there is a steel frame in side.

I can't take a picture because it is on the ground in pieces, sorry.

Steve

Stephen

Thanks for the plan. With regard to cladding the building, are you able to confirm that it can be clad and is capable of taking the weight of cladding? As it is an existing building is it also possible to send me a photo of how it currently looks?

Thanks

I do however appreciate that it is rather prominent and thus if you are saying that it would only get planning consent with grey Hardyplank I will tell him that it has to be over clad in that.
