Vertical Bike Locker Information Sheet

Vertical Bike Locker

A fantastic space-saving bike locker ideal for your home, garden or office. The bike is stored up on its back wheel so using less floor space, freeing up valuable space. Inside this thick, weatherproof, all steel unit is an easy access guide ramp and a wheel retaining clamp. Simply open the heavy-duty, fully galvanised door. Then lift and push the bike into the wide guide rail. Your front wheel lifts over the wheel retaining hook and then drops into place clamping the bike wheel into place.

The vertical bike locker is also ideal for commercial projects, where cyclists will appreciate the extra space to store their helmet, bag and other accessories. When installed in places like train stations or offices, it's an extremely convenient bike storage solution as cyclists can leave both their bike and anything else locked away securely. There's no need to worry about carrying helmets or heavy bags.

Specification
