

G1: 2 Elms, one of which is dead. Possible Elm disease but unconfirmed. Main reason for the requested fell is to remove the potential of future issues and the associated cost that would go with it.

T3: Tree stands approximately 12m tall with the crown on the Southern aspect being 8.5m from crown centre. After the requested works. The Southern lowest limb would be pollarded back to a previous point, highlighted within provided pictures. After the reduce of mid and upper crown, there would be a residual crown of 7m on Southern aspect which would be the fence line level. No discernible change to height or remaining sides.

T4: Tree stands approximately 12m tall with the crown on the Southern aspect being 6.5m from crown centre. After the requested works, there would be a residual crown of 4.5m on the Southern aspect. No discernible change to height or remaining sides.

Reasons for works are to minimise debris from trees and birds falling onto parking areas which, at present is preventing residents from using the bays.

With the exception of G1, works would not be detrimental nor affect the amenity values.
