Commenter Type: Neighbour

Stance: Customer made comments in support of the Planning Application

Reasons for comment:

Comments: Last evening we were kindly invited round for cheese & biscuits/drinks and for my husband to look at the plans.

There are no measurements recorded on the plans - there is a scale which we used.

Supporting paperwork indicates a potential hiccup for us: whilst the new building would not 'significantly affect our light' the drawings do show the actual degree not being that far away from the statement. We need to know what 'below significantly affect' looks like....

Our question is: how much will the finished building affect light in my office/our dining room.

None of us were able to say.

So, they kindly suggested they would ask the architect to have a word with us... we did say that if this would involve cost for them - then they could ask him for us and give us a definitive answer.

If for any reason this proves to be difficult then please could we ask for a copy of the plans as McConvilles are our clients so we could pass it by them (who know this house well so it's easy)

Before leaving we reassured our neighbours we are still very supportive - we just need to be reassured we won't be sat in the dark in our dining room.

Kay very kindly said she totally understood and I agreed we would keep working with them.

If there is no loss of light then we have no objection and wish them a smooth build :-)
