***Please note, this price is fully inclusive, includes VAT, expert fitting and contains no hidden extras.**

The double-glazed Argon gas-filled energy saving sealed units will be installed into the Rehau P.V.C.u. frames using internal beads for added security. The double-glazed units fitted will include several energy-saving features, using heat-reflective Planitherm coated glass, warm-edged spacer bars and Argon gas to improve the energy efficiency of your property.

Our Rehau frames all feature a high gloss finish, slim sight lines and can achieve the highest possible thermal and acoustic performance. Our Rehau frames are "A" rated meaning they are incredibly energy efficient, especially when paired with the energy saving double glazed units that we provide.

We know security for you and your home is paramount, so all our window and door systems are made from only the highest quality P.V.C.u and have been designed to provide rigidity and strength. They also come complete with steel reinforcements and high security multi point shoot bolt locking mechanisms, giving you peace of mind about the security of your home.

Lastly, our Rehau windows and doors hold the British Standards certification – BS EN 140001 for environmental standards and our window systems are rated ‘A’ by the British Research Establishment Green Guide for Recyclability, which is something that we deem to be very important.

Our 10-year Insurance backed guarantee is included. Our insurance includes £5 million pounds cover on products and public liability, and £10 million pounds on employer’s liability for your peace of mind.

In carrying out your proposed installation, our fitters will dust sheet traffic areas where they are working. We also ensure that the debris will be removed, recycled if possible (P.V.C.u and Aluminium), and the working areas will be left clean and tidy at the end of every working day.

Our installers will cover all silicone sealant with trims to prevent discolouration from dirt in the atmosphere. Where the double glazing is installed to the internal walls an acrylic paintable sealant will be used. Where P.V.C.u is sealed together, a hard polymer (plastic) sealant will be used, leaving your new installations looking newer for longer.
