A2c00191

On one of the many documents, it states: 'It is expected that on average 30 loads per day would be bought onto site in 4- axel rigid trucks (Maximum 20T)'. I live on this road and cross it daily when getting off the bus; my son rows at the rowing club and also crosses this road daily. We both cycle along this road. 30 additional trucks daily on this narrow congested road is dangerous and will add further to terrible air and noise pollution as they pile up from the traffic lights and behind the waiting bus etc.

Another statement says: '...the A259 Brighton Road (has) no residential properties to the road ... it is considered that it is unlikely that significant noise impacts will occur from increased traffic to the A259 as a result of this development.' We live on this road.

I am also concerned about the noise, vibration and dust particulates that will be sited just down the raod particularly since the prevailing westerly winds will blow along to us living on Brighton road.
