Please find attached pictures that i have taken in Irene Ave this morning.

You will see that they show that there is obviously a parking problem in Irene Ave, despite what councillors may wish to believe!

The fire appliance in the pictures was sat in the road unable to pass through for a minimum of 30 minutes, it sounded its siren at least 3 times, i witnessed fire fighters knocking on doors to houses, obviously trying to find the owners of the cars as they needed to be moved before the appliance could proceed along the road. This than had a knock on effect at the northern end of Irene Ave, as traffic coming from this end obviously couldn't pass through, bear in mind that all this was happening outside of a school, lets put safety before finances. Had this of been an emergency what might of been is any bodies guess!

Residential development in the street would add to traffic problems any time of the day or night, like i say, contrary to the beliefs of councillors that suggest there are no traffic problems in the street!
