FAO: Peter Barnett.

Dear Mr Barnett,
I have read with great interest the objections from 47,49,53 and Sompting Parish Council. With regards to the parish Council I would like to state that if the shed is placed where I have proposed to put, it the windows will not face 53. Even if they did they would be looking at a 2 metre high fence. The doors will open down the garden not up and even if they didn't the fence would prevent anyone overlooking in to 53.I fully intend to place guttering around both sides of the shed, which is more than 53 did when he was allowed to build his extension 2 inches over my boundary line. The shed will not be over the specified height. If the application fails then I will have no alternative but to erect it right at the bottom of the garden 2 metres from all the boundaries. I wanted to move it to place it right out of everyones way.
I note the comments from the neighbours and respectfully ask why they dig out the reed bed at the bottom of the garden and why they build fires in to the reedbed, if they are so concerned about the wildlife. I would also respectfully ask why my neighbour has one shed up against my boundary fence, one summerhouse (over 2.5 metres at it's highest point) up against my boundary, one shed on a large graveled area and one lean to greenhouse on his other boundary if they are so concerned with "over development". The objections are of a personal nature rather than sound planning objections.
With regards to the application I will comply with any stipulations the council may feel necessary.
Regards
Jon Wheeler.
