High Performance Facade Finishes

Kingspan facades

Introduction

Colour is an essential part of our built environment – incorporating colour into a building façade can create an immediate visual and emotional impact, it has a notable influence on our impressions and our behaviours.

This edition of the Kingspan Facades Colour Book is designed as an introduction to our extensive PPC range (polyester powder coating) for inspiration and for technical information. PPC is applied in our world class facility in the UK within metres of the fabrication facility. The line is Qualicoat approved, this is an assurance that defines the minimum requirements for plant and equipment, coating materials and the finished cassettes.

Our standard colours are available in a variety of gloss levels, from matt to high gloss and are all available as Class 1 with most also available as super-durable Class 2. For further technical information please turn to page 77.

Powder coating on aluminium can replicate the appearance of other materials, giving texture and tone as well as colour, turn to our ‘Inspired by’ section for more information.

All associated system accessories can be finished in the same range to compliment and complete the facade.

QUALICOAT SEASIDE

Licence No. 1013

For sample colour swatches, or to speak to a representative, please do email **info@kingspanfacades.co.uk**

All our aluminium rainscreen cassettes including Dri-Design and Shingle are suitable for powder coating. For more details about the range please see **www.kingspanfacades.co.uk**

Lifespan of Polyester Powder Coating (PPC)

It is accepted that all polyester power coatings will suffer the effects of ageing. Much of this can be avoided by routine cleaning, but it is also the case that many buildings once handed over may have their windows cleaned, but little attention will be paid to the cleaning and maintenance of the polyester powder coat itself.

The use of high quality powders, treated to the correct standards and procedures will ensure that the powder coating lasts for the intended length of time.

Responsible architects who are specifying projects that are in extreme environments, high rise or hard to reach applications must ensure that the correct surface finish and guarantee is specified.

Licence No. 1013

Class 1 is used extensively in the UK, it is an economical formulation which offers good life expectancy with minimal maintenance. Class 2 powders, sometimes referred to as 'Super-durable', are being recognised by a growing number of specifiers and used on prestigious projects across the UK.

Class 2 powders offer a superior resistance to UV and are formulated with different compounds. More expensive, these powders can offer extended life expectance with reduced maintenance.
