1.0 INTRODUCTION

Instruction

1.1 Stuart Michael Associates (SMA) has been appointed by Manhattan Furniture Development (the "Applicant") to provide advice upon the transport implications of a proposed industrial development (the "Site") within the grounds of the Manhattan Furniture store located in Lancing Business Park, Lancing as shown in **Figure SMA1**.

Scope of Report

1.2 This report principally deals with the transportation considerations of the site and will examine the sustainability issues associated with the site, in terms of access and movements from the site to local services and facilities; with particular focus on alternative modes of travel.

1.3 This report is structured as follows:

- Section 2: Existing Condition – this chapter reviews the existing conditions in the vicinity of the development site in relation to the surrounding area, the existing trip generation to the site and the availability of local services and facilities;

- Section 3: Baseline Traffic Condition – this chapter reviews the existing transport conditions surrounding the development site focusing on accessibility by walking/cycling and public transport. The latest accident data for the last three years will also be established;

- Section 4: Development Proposals – this chapter describes the development proposals in terms of its scale, type and access arrangements for pedestrians and vehicles. In addition, the parking strategy and internal layout for the development will be examined;

- Section 5: Travel Demand Assessment – this chapter considers the potential trip generation from the development when fully occupied and its impact on the local highway network; and

- Section 6: Summary and Conclusions – this chapter provides the summary and conclusion to the findings and results of the Transport Statement.

2.0 EXISTING CONDITIONS

Existing Site Information

2.1 The proposed development is located on the eastern edge of Lancing Business Park, in Lancing, West Sussex. The village of Lancing lies on the coastal plain between Worthing to the west, Shoreham-by-Sea to the east and Steyning to the north.

2.2 Within the Business Park surroundings, the site is bordered by a recreational park to the west, the seafront to the south, residential dwellings to the east and Churchill Industrial Estate to the north.

2.3 Chartwell Road and Marlborough Road forms a continuous loop around the Business Park with a number of accesses into other business units. These links are subject to a one-way route in a clockwise direction.

2.4 Public transport facilities are located within proximity to the site with the main bus route running along the A259 Brighton Road and Western Road. Lancing railway station is located approximately 750 metres north-east of the site.

2.5 Close to the railway station are a number of local services and facilities, which include a supermarket, post office, doctors and dentists, banks, convenience stores, takeaways and cafes as shown in **Figure SMA2**.

Existing Air Quality Management Area (AQMA)

2.6 As required by the Department of Transport (DfT) latest issue for "Guidance on Transport Assessment (March 2007)", information regarding the presence of a designated AQMA within or near the site would be necessary. This would serve as an indication of the level of air pollutants where the site is situated.

2.7 Information based on the UK National Air Quality Archive indicates that Lancing is not dedicated as an AQMA. The nearest site is found in Shoreham, east of Lancing.

Existing Traffic Conditions

2.8 Local officers at West Sussex County Council (WSCC) identified the need to assess the traffic impact at the A259 Brighton Road/Western Road junction, as a key interchange for traffic movements in Lancing.

2.9 A peak hour weekday Manual Classified Traffic Count (MCC) survey was therefore commissioned by SMA on 7th February 2008; undertaken by Countsequential Surveys to provide up to date and detailed information on local traffic conditions (**Appendix 1** refers).

2.10 A morning peak survey between 07:30 – 09:30 and evening peak between 16:30 – 18:30 was conducted at the A259 Brighton Road/Western Road junction. Observations of any queuing at the junction approaches were also noted.

2.11 Results from the survey indicate that the peak period within the morning and evening peak survey occur at 07:30 – 08:30 and 16:30 – 17:30 respectively. The peak hour traffic movements are summarised in **Figure SMA3**.

3.0 BASELINE TRANSPORT CONDITIONS

Access by Foot and Cycle

Potential by Foot

3.1 Almost all journeys include a pedestrian element, making walking an essential part of the transport system. As identified in the 2006 National Travel Survey (NTS), 78% of walk trips are under a mile (1.6km) and the average walking trip takes 16 minutes. This is also reflected in the **Planning Policy Guidance Note 13: Transport (PPG13)** which states that walking has the greatest potential to replace short car trips, particularly those under 2km.

3.2 As the potential tenants would be office employees, the predominant trip ends would likely be lunch trips or personal business (i.e. Banks, Post Office). Figure SMA2 illustrates the potential trip ends from the site which is within the comfortable walking distance as advised in the NTS for a range of daily needs.

3.3 Evidence from a site survey carried out by SMA on the 4th February 2008 confirmed that a good network of paved illuminated footways and pedestrian crossings are available in the vicinity of the site; providing direct links to bus stops, the railway station and many of the local services and public facilities as mentioned in paragraph 2.5.

3.4 Walking distances to the nearest bus stop and railway station takes approximately 3 minutes and 12 minutes respectively from the site. These facilities are well linked by footways and pedestrian crossings. Each of these routes is highlighted in Figure SMA2.

Potential by Cycle

3.5 Cycling is the most energy efficient form of transport as travel by bicycles can be more predictable than by car for short journeys, offering a more sustainable alternative to the car. As stated in PPG13, a distance of less than 3 miles (5km) is considered an option to replace short car trips.

3.6 As identified in Figure SMA2, cycling is considered favourable in terms of its distance to various trip ends and the general flat topography of the surrounding. Street lights are present along the local highway network which will be beneficial for cyclists during the night and winter periods.

3.7 A number of cycling facilities are available which include sheltered cycle storage at Lancing railway station and a cyclist priority scheme at the junction of Brighton Road and Western Road in the form of an advanced stop-line for cyclists.

3.8 Based on the Sustrans National Cycle Network, the A259 Brighton Road is designated as the National Cycle Route 2 (on-road) and also an important costal route in West Sussex. It has links starting from Chichester, Worthing, Lancing and finishes in Shoreham-by-Sea. This provides an alternative to commute from the various coastal towns to the site and provides a safe route for cyclists (**Figure SMA4** refers).

3.9 Based upon these provisions, there is therefore great potential for the majority of short journeys to be carried out either on foot or cycle; thereby reducing the necessity for car based trips.

Access by Public Transport

Bus

3.10 The development site is situated in proximity to a number of scheduled bus routes operated by five services calling at Lancing. The bus routes run along the A259 Brighton Road, Western Way, Tower Road and South Street. These services and their routes, and the bus stop locations are identified in **Figure SMA4**. This information is based upon the latest timetable information available from West Sussex County Council (Spring 2007).

3.11 The nearest bus stop is approximately 250m south of the site and is easily accessible via Elm Grove. This distance meets the IHT guidelines for "Planning for Public Transport in Developments" which states that a new development should be located less than 400m walking distance to or from the nearest bus stop.

3.12 There are direct services linking to major coastal destinations such as Littlehampton, Worthing, Shoreham and Brighton operated by Stagecoach (Service No. 9, 700 & PULSE), Brighton & Hove (Service No.2) and Surrey Connect (Service No.106).

3.13 Below is a summary table showing the five bus services and their frequency between Mondays and Fridays. The time period includes morning and evening peak periods. Full detail of the bus timetables are found in **Appendix 2**.

Service Number	Route	Monday to Friday	
		Daytime	Evening
PULSE	Durrington - Worthing - Lancing	10 mins	Hourly
2	Worthing - Shoreham - Brighton	NA*	Irregular
9	Southwick - Shoreham - Worthing - Littlehampton	Hourly	–
106**	Mannings Heath - Cowfold - Steyning - Worthing	1 journey	–
700	Brighton - Wothing - Littlehampton	10 mins	–

(* Not available, ** Operated under contract to WSCC)

Rail

3.14 The nearest railway station to the site is Lancing railway station which is located on the West Coastway line.

3.15 The railway station is operated by the railway company, Southern and there is a regular service between Lancing and London Victoria and London Bridge stations, via East Croydon, where connections to the North and West can be made.

3.16 There is also a regular service to and from Brighton and Worthing stations. A full train timetable from Lancing is attached in **Appendix 2**.

Access by Road

Strategic Road Network

3.17 Lancing Business Park is located approximately 60 miles (96km) south of London, with excellent road links to major town and cities such as Brighton, Chichester and London. These are easily accessible via the A27, located approximately 1.7km north of Lancing with direct connections onto the A24 and A23.

3.18 The A259 Brighton Road is a major coastal route running south of the site between Worthing to the west and Brighton to the east.

3.19 These strong highway links would encourage potential businesses to set up their offices in the Business Park thus creating new job opportunities and contributing to the local economy.

Local Highway Network

3.20 The Business Park is accessible via two T-junctions at the southern end of Western Road, namely Western Road/The Triangle and Western Road/Winston Road. Western

Road is a 30mph single carriageway linking the A27 to the north and the A259 Brighton Road to the south.

3.21 Chartwell Road and Marlborough Road are single carriageway roads providing access into Lancing Business Park and the adjacent Industrial Estate. Traffic is directed in a clockwise movement around these roads and both roads are subject to a 30mph speed limit.

3.22 Parking restrictions are present along Chartwell and Marlborough Road on the western and southern face of the Business Park. This is extended along Winston Road in the northbound direction.

Road Safety Condition

3.23 To ascertain the accident records on the local highway within close proximity of the site, Personal Injury Accident (PIAs) data has been procured from Sussex Police for the latest three year period from 4th January 2005 to 11th December 2007.

3.24 The accident data was based within a catchment area that encompasses the various local roads near to the site. The selected area bordered from Western Road across the south of the railway line, south towards A259/South Street and A259/Western Road.

3.25 The accident results identified a total number of 35 PIAs as occurring within the analysed area. Of these, 6 were of a serious nature, whilst 29 resulted in slight injury. Only three PIAs were recorded in proximity to the site along Chartwell Road and Marlborough Road. The majority occurred along the A259 Brighton Road (21 PIAs) and Western Road (8 PIAs). A few scattered PIAs were found on Lancing Park (1 PIA) and the A2025 South Street (2 PIAs). The PIA locations and their descriptions are illustrated in **Figure SMA5**.

3.26 Two accident clusters were identified from the accident record. They were located along the A259 Brighton Road at the junction with Western Road (4 Slight) and the A2025 South Street (5 Slight and 1 Serious).

3.27 Analysis identified that the majority of accidents at the junction of Western Road were nose-to-tail incidents while the junction at South Street indicates drivers losing control and motorists failing to give way at junction as the major contributor.

3.28 Three PIAs were recorded as occurring along Chartwell Road and Marlborough Road whilst a further two took place at the junction of Western Road with Winston Road. Each of these 5 incidents involved only slight injury with the majority being nose-to-tail incidents (ref no: 11, 18, 28), with a further accident due to lost of control (ref no: 28) and external factor (ref no: 9) as shown in Figure SMA4.

3.29 Whilst a relatively high number of accidents were recorded along the A259 Brighton Road, this can be related to the higher speed and volume of traffic running on this coastal road. Considering that only three PIAs occurred on Chartwell Road and Marlborough Road and another two PIAs at Western Road/Winston Road showing no specific trends, it is anticipated that there are currently no safety concerns on the two access links and junction serving the site within the last three years.

4.0 DEVELOPMENT PROPOSALS

Background

4.1 The planning application proposes to develop the existing open space within the grounds of the Manhattan Furniture Store with new employment units. These would comprise a mixture of 13 small B1, B2 and B8 units housed in four separate blocks. The existing canteen would be relocated adjacent to the existing access with Chartwell Road, south-east of the site, which shall replace the existing car parking spaces for the Manhattan Store.

4.2 The total floor space for all units is 1783.5m^2 with individual floor sizes ranging from 63m^2 to 225m^2. The size and layout of the units can be referred to in the architect's drawing in **Appendix 3**.

4.3 Each unit is allocated three to six parking bays with a disabled space at the front of each unit. (Appendix 3 refers).

Access Arrangement

4.4 It is proposed that vehicular and pedestrian access to the employment site would be achieved via two existing access points off Chartwell Road. These will be located at the northern and southern end of the site boundary with Manhattan Drive providing a link to both access points.

4.5 The industrial units will be served via a new access named Manhattan Crescent in the form of a crescent from Manhattan Drive. This shall be a 5.8m wide road providing two-way movements with direct frontage access into all units.

4.6 The visibility splays for both access points were identified to ensure adequate inter-visibility between vehicles on Chartwell Road and the site access. With reference to the **"Manual for Streets (2007)"** document, the recommended 'y' distance based on the speed limit of 30 mph is 40m taken from a 'x' distance of 2.4m from the give-way line. This is the distance that a driver exiting from a minor arm can see to his left and right along the main road. Site observations and measurements confirmed that clear unobstructed visibility is achieved at both accesses. Based upon this, motorists will be able to enter/exit the site without having a detrimental impact upon the existing highway network.

Internal Road Layout

4.7 It is anticipated that traffic entering or exiting the site would be controlled by means of a simple T-junction for both access points. This is designed with a 7.0m and 8.4m wide road at the north and south access respectively.

4.8 A swept path analysis has been undertaken to determine the adequacy of the design width for easy vehicular movements into and out of the site. To test for a worst case scenario, the analysis was based on a 2-axle rigid HGV manoeuvring into Manhattan Drive to demonstrate ease of turning (**Drawing No. 2845.001** refers). The results showed that a vehicle of this length will have little difficulty entering the site in a forward gear and reversing into the lorry park.

4.9 A mini-roundabout is proposed within the site near the southern site entrance. The aim is to distribute traffic between the development and the existing Manhattan car park.

4.10 It is proposed that there shall be three uncontrolled pedestrian crossings within the site located across Manhattan Drive, opposite Unit 1 and Unit 11, and the other located between the canteen and Manhattan car park (Appendix 3 refers). The existing footway would be extended into Manhattan Drive and Manhattan Crescent to create a continuous pedestrian path; thereby encouraging sustainable trips to the site.

Parking Provisions

Car Parking

4.11 As part of the planning application, the proposed number of parking spaces provided in the development has to comply with the local planning guidance. This will be determined by reference to the current WSCC Parking Standard set within the Supplementary Planning Guidance adopted by the Council in November 2003. This will therefore be used to determine the required number of parking spaces for both vehicles and cycles in this development.

4.12 Based on the Parking Standard, 35 spaces would be required for a mixture of B1/B2/B8 units. The development proposes to provide a total of 55 parking spaces including 13 disabled spaces within the curtilage of the site. These provisions therefore satisfy the requirement set in the Parking Standard.

Cycle Parking

4.13 It is proposed that two sheltered cycle storage areas will be provided within the site capable of holding 10 cycles each. Based upon the proposed location, it will be possible for employees to assess them via Chartwell Road along the northern boundary of the site. This provision exceeds the minimum requirement set in the Parking Standard for both employees and visitors at the site. The cycles will be secured on standard Sheffield stands.

Development Contributions

4.14 As part of the planning application, the developer is required by WSCC to put forward an amount of financial contributions to highways and transport improvements. A **'Total Access Demand'** otherwise known as TAD contribution for this development is therefore required from the developer. The methodology is based on the total number of movements into/out of the site, with consideration on infrastructure contribution per occupant and sustainable transport contribution for each occupant. This will be adopted by the developer as part of the planning application for this new employment site.

4.15 This contribution is in agreement with WSCC Transport Contributions which the developer will provide or contribute towards the cost of infrastructure and other measures to mitigate the impact from the development on the surrounding local highway and ensure the development is accessible by sustainable transport.

4.16 The total transport contribution for this development would therefore be **£44,000** for the 13 business units. This figure is attained from the WSCC website, which has an online contributions calculator whereby the total TAD would be automatically calculated once mandatory parameters such as office floor space; floor space per employee and parking provision are provided.

Safety Audit

4.17 A Stage 1 Road Safety Audit has been commissioned by SMA on request by WSCC for the proposed development access and various highway infrastructure improvements for the development.

4.18 At the time of writing, the audit has yet to be carried out due to the finalising of the scheme layout by the architect. This will therefore be submitted at a later stage separately from the Transport Statement.

5.0 TRAVEL DEMAND ASSESSMENT

Potential Trip Generation

5.1 The desire to travel and the mode of travel selected for a given journey is influenced by a number of factors including, for example: site location; accessibility by public transport; accessibility by foot or cycle; availability of parking, sense of security and car ownership. Consequently trip generation from a new employment site can vary considerably. The type of business (B1, B2 and B8) can also impact upon travel demand.

5.2 In addition to these factors, the purpose of trips generated by new business will also have a bearing upon the mode of travel chosen and the timing of such journeys.

5.3 In general, work-based trips will occur during the normal commuter periods of 07:30 – 09:30 and 16:00 – 18:00 although flexible working practices are becoming increasing popular and tend to “flatten” peak hour trip profiles.

Trip Generation

5.4 To ascertain the potential number of trips that would be generated when the industrial units are completed and occupied, trip rates for the prospective occupants of the site have been derived from the TRICS (Trip Rate Information Computer System) database to provide a robust estimate for trip generation.

5.5 The TRICS database contains representative surveys of the traffic generating characteristics of a wide range of different land uses at numerous locations within the United Kingdom and is a widely used transportation planning tool for determining representative trip generation rates for new development proposals.

5.6 An assessment of the TRICS database found a number of sites with relatively similar characteristics in terms of location, size and public transport provisions as the proposed development. The peak hour trip rates for both inbound and outbound movements (Data card in **Appendix 4**) are identified and used to determine the potential development generated trips. The trip rates have been consulted and agreed with WSCC as being acceptable for this development. These are detailed in **Table 5.1** and **Table 5.2**.

Time period	Inbound (trips /m²)	Outbound (trips /m²)	Total (trips /m²)
AM Peak (07:30 - 08:30)	1.101	0.183	1.284
PM Peak (16:30 - 17:30)	0.282	0.995	1.277

Table 5.1: Estimated trip rates for development

Time period	Inbound (vehicle/hour)	Outbound (vehicle/hour)	Total (vehicle/hour)
AM Peak (07:30 - 08:30)	20	3	23
PM Peak (16:30 - 17:30)	5	18	23

Table 5.2: Estimated trip generation from development

5.7 The TRICS data card used for this development falls under the Business Park category and it indicates an average vehicular trip rate of 1.284 per 100m^2 Gross Floor Area and 1.277 per 100m^2 Gross Floor Area in the AM and PM peak periods respectively.

5.8 These trip rates would be used to predict the level of traffic likely to be generated from the proposed development once it is occupied and in operation. The results from Table 5.2 shows that a total number of 23 vehicular trips would potentially be generated during the AM and PM peak hour periods. It is assumed that this additional traffic would take place during the normal working days of Monday to Friday.

5.9 It is also assumed that the development traffic would follow a similar traffic pattern as those determined from the existing AM and PM peak traffic movements (Figure SMA3 refers) at the junction of A259 Brighton Road with Western Road.

5.10 **Figure SMA6** shows the level of development traffic and its turning proportions at the A259 Brighton Road/Western Road junction.

Traffic Growth

5.11 The DfT document "Guidance on Transport Assessment (March 2007)" recommends that a development should be assessed for a period of no less than 5 years on its impact on the local highway network, after registration for a planning application.

5.12 In the context of the Transport Statement, the forecast year would therefore be 2013 assuming that the application is submitted in 2008.

5.13 The National Road Traffic Forecasts (1997) (NRTF) and Trip End Model Presentation Program (TEMPRO) models have been in existence for several years and are widely recognised by transport consultancies to provide a robust prediction of a growth rate.

5.14 It is therefore reasonable that the growth rate for the development is based on these models. The growth rate from 2008 to 2013 is predicted to be 1.07 in the AM peak and 1.06 in the PM peak. These figures would be used to generate future traffic loadings when assessing the key junctions near to the site.

Junction Assessment

5.15 In order to establish the impact that such a development would create on the operation of local junctions, an assessment would be required to determine the working capacity during the peak hour periods.

5.16 The junction capacity assessment therefore only needs to consider the key junctions that are nearest to the site. The impact beyond this would be less crucial as the impact diminishes with distance from the site since traffic can disperse in various directions.

5.17 Pre-consultation with WSCC indicates a concern over the existing capacity at the A259 Brighton Road/Western Road junction. The junction is controlled by traffic signals with pedestrian facilities on Western Road and the A259 Brighton Road East. With the addition of development traffic, WSCC anticipated that this could have an adverse impact on the operation of this junction and therefore would require an assessment to identify any potential overcapacity on its approaches. With regards to the two priority junctions at Winston Road and Commerce Way, WSCC felt that these junctions would operate without any problems under current traffic conditions and also with the influx of development traffic, therefore no assessments are required.

5.18 Information was required from WSCC to understand the signal phasing and timings in operation at the junction. The junction is linked to two pelican crossings.

5.19 Assessment has been undertaken using the latest LINSIG version 2 software model to predict the degree of saturation (a ratio of the vehicle flow against flow capacity of the arm) and the maximum queue length occurring at each arms of the junction. This would be assessed under existing (Year 2008) traffic loadings and future (Year 2013) traffic with development loadings.

5.20 For the purpose of junction testing, it has been assumed that 100% of the development's generated traffic would assign to the A259 Brighton Road/Western Road junction. This will provide an indication of the junction capacity under a 'worst' case scenario.

5.21 From the traffic counts surveyed, it was determined that the AM peak was (07:30 – 08:30) and PM peak was (16:30 – 17:30) for the junction. These flows will be used to assess the junction. A 120 second cycle time will be used for the assessments.

5.22 The results from the LINSIG model for both AM and PM peaks under 2008 with and without development and 2013 with development traffic loadings are summarised in **Table 5.3** to **Table 5.5**. Full LINSIG results are found in **Appendix 5**.

120 second cycle time

Scenario	Peak	PRC	A1		A2		B	
			Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)
2008	AM	6.2	21.3	83.6	19.0	73.3	20.7	45.6
	PM	-4.5	25.8	93.1	21.4	82.5	16.4	37.6
Scenario	**Peak**	**PRC**	**C**		**D**		**F**	
			Mean Max. Queue	**Degree of Saturation (%)**	**Mean Max. Queue**	**Degree of Saturation (%)**	**Mean Max. Queue**	**Degree of Saturation (%)**
2008	AM	6.2	3.4	30.2	1.5	13.8	16.2	84.7
	PM	-4.5	2.6	23.5	3.9	31.4	24.4	94.0

Note: A1 – A259 Brighton Road West (nearside - Ahead and Left)
A2 – A259 Brighton Road West (Ahead only)
B – A259 Brighton Road East (Ahead only)
C – A259 Brighton Road East (Right-turn)
D – Western Road (Left-turn)
F – Western Road (Right-turn)

Table 5.3: A259/Western Road junction under 2008 peak traffic flow

5.23 According to the results from Table 5.3, the junction is operating within adequate spare capacity but suffers queuing on most arms. It is noted that the western arm of A259 Brighton Road (A1) and the right-turn lane on Western Road reaches a degree of saturation close to the threshold of 85% during the AM peak which makes these arms susceptible to queuing and delays.

5.24 Similarly, during the PM peak, the junction suffers from long queues on most of its arms and is operating slightly over capacity. Both A259 Brighton Road west (A1) and Western Road (F) have exceeded the 85% limit while lane (A2) on the A259 west is close to saturation.

5.25 This occurrence is supported by site observation during the peak hours where traffic turning right from Western Road was hampered by queuing and slow moving traffic after the green phase with less than 10 vehicles able to clear the junction. This inevitably causes blocking to the eastbound traffic on the A259.

120 second cycle time

Scenario	Peak	PRC	A1		A2		B	
			Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)
2008 w\dev	AM	5.7	21.9	84.8	19.4	74.3	20.7	45.6
	PM	-6.0	27.7	95.4	22.0	84.6	16.7	38.2
Scenario	**Peak**	**PRC**	**C**		**D**		**F**	
			Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)
2008 w\dev	AM	5.7	3.5	31.0	1.5	14.0	16.4	85.1
	PM	-6.0	2.6	23.7	3.9	31.4	24.6	93.7

Note: A1 – A259 Brighton Road West (nearside - Ahead and Left)
A2 – A259 Brighton Road West (Ahead only)
B – A259 Brighton Road East (Ahead only)
C – A259 Brighton Road East (Right-turn)
D – Western Road (Left-turn)
F – Western Road (Right-turn)

Table 5.4: A259/Western Road junction under 2008 with development peak traffic flow

5.26 Table 5.4 shows the junction being assessed under existing traffic loadings but with additional traffic from the development. The results show little differences in the degree of saturation and queue length during both peak hours when compared with Table 5.3.

120 second cycle time

Scenario	Peak	PRC	A1		A2		B	
			Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)	Mean Max. Queue	Degree of Saturation (%)

D – Western Road (Left-turn)
F – Western Road (Right-turn)

Table 5.5: A259/Western Road junction under 2013 with development peak traffic flow

5.27 Table 5.5 indicates that the junction would be operating with no spare capacity under 2013 with development traffic loadings. Arms that were under pressure during existing AM peak hour had exceeded the acceptable saturation level of 85% (A1 and A2) and (A1, A2 and F) had worsened during the PM peak period. Queuing is still present on most arms of the junction except the A259 Brighton Road east (C) and Western Road (D).

5.28 This assessment has demonstrated that additional future traffic growth at this junction would further exacerbate the level of congestion experience at the junction; something that WSCC has anticipated. The results obtained also reflected the queuing problems witnessed during the traffic survey. Further traffic growth with development traffic would cause the junction to operate over capacity and suffer from longer queues. Although LINSIG has predicted a potential capacity and queuing problem, it is noted that this is not directly caused solely by the addition of development traffic as shown in Table 5.4, but the growth in background traffic around Lancing. It is therefore reasonable to conclude that traffic generated from the development would not actually cause any further detrimental impact on the junction.

Travel Plan

5.29 Central and local government place great importance upon the contribution that travel plans can alleviate the impact of travel on the environment in terms of lowering the greenhouse gases, reducing delays and congestions on national and local highway, improving road safety, and towards sustaining a vibrant economy.

5.30 It is the Government objective to increase the level of awareness among the motoring public of the impacts of travel decisions and promote the use of travel plans amongst businesses, schools, hospitals and other organisations (PPG13 para.87 refers).

5.31 **Planning Policy Guidance Note 13** (para.89) recommends that travel plans should be submitted alongside planning applications for all new developments comprising jobs, shopping, leisure and services.

5.32 According to current best practices, it has shown that local authorities are very keen on implementing a travel plan as a legal condition for approving a planning application. Adur District Council has identified in their local Transport Plan that a business travel plan would encourage a reduction in peak period traffic congestion on the local highway network.

5.33 As part of the planning application, a travel plan is therefore required by WSCC for the proposed employment site. Its main objective is to combat over dependency on cars and single occupancy of car use by offering a package of alternative measures to encourage and influence a change in travel behaviour and pattern of a workforce.

5.34 According to the DfT published document on "The Essential Guide to Travel Planning (Nov 2007)", it states that a good travel plan have succeeded in cutting the number of people driving to work by 15%. As a result, there would be a significant reduction in the number of car miles, with the potential to improve on issues of congestion surrounding the site.

5.35 The emphasis of the travel plan would therefore provide suitable measures, informative campaigns and attractive incentives to transfer the employees from their car-borne trips to foot, cycle, and public transport or shared car use.

5.36 A Travel Plan for the development is attached in **Appendix 6** of this Transport Statement.

6.0 SUMMARY AND CONCLUSION

6.1 The principal findings of the Transport Statement can be summarised as follows:

- the proposed development lies in a sustainable location in Lancing and has good pedestrian, cycle and public transport access to a range of facilities and services, including local employment opportunities;

- the proposed development of 13 business units can safely accessed from Chartwell Road;

- the site will generate 23 vehicle movements in both peak hours but this will not have a detrimental traffic impact;

- the entry/exit arrangement has been designed to an acceptable standard with sufficient width for easy vehicular movement, clear visibility in either direction and is acceptable to the Highway Authority;

- the new development is within a comfortable walking distance to the nearest bus stop and main railway station, and both are comfortably within the suggested distances specified in the IHT Guidelines for “Planning Public Transport in Developments”;

- car and cycle parking provision within the development have met the requirement set in the WSCC Parking Standard;

- the LINSIG assessment on the A259 Brighton Road/Western Road indicates that the influx of development traffic will have minimal impact on the operation of the junction, but suffer in capacity due to background traffic growth.

6.2 Taking all the foregoing into account, it is concluded that the proposed development is acceptable in traffic and transportation terms. The local Highway Authority is respectfully requested to recommend that planning permission be granted.

1.	SLIGHT. 04/01/2005 AT 10:30 FINE, DRY, STREET LIGHT PRESENT C1 COLLIDED WITH C2 WHILE TURNING OUT OF WESTERN CLOSE.
2.	SLIGHT. 23/02/2005 AT 15:00 FINE, DRY, NO STREET LIGHTING REAR END SHUNT BETWEEN C1 AND C2.
3.	SLIGHT. 31/03/2005 AT 16:48 RAIN, WET, STREET LIGHTS PRESENT. C1 LOST CONTROL AND COLLIDED WITH ONCOMMING HGV.
4.	SLIGHT. 14/05/2005 AT 09:06 FINE, DRY, NO STREET LIGHTING C1 SOUTHBOUND COLLIDED WITH C2 EASTBOUND AT JUNCTION.
5.	SLIGHT. 29/05/2005 AT 07:45 FINE, DRY, NO STREET LIGHTING. C1 LOST CONTROL AND SMASHED INTO WALL, COLLIDED WITH PARKED C2.
6.	SLIGHT. 14/06/2005 AT 06:46 FINE, DRY, STREET LIGHTS PRESENT. C1 STRUCK PEDAL CYCLIST 10M FROM JUNCTION.
7.	SLIGHT. 17/06/2005 AT 06:30 FINE, DRY, STREET LIGHTS PRESENT. C1 RUNS RED LIGHT AND HIT C2 AT JUNCTION.
8.	SERIOUS. 03/11/2005 AT 10:53 FINE, DRY, STREET LIGHT UNKNOWN. C1 LOST CONTROL AND HIT ONCOMMING C2 AND THEN C3.
9	SLIGHT. 14/11/2005 AT 15:05 FINE, DRY, NO STREET LIGHTING. LGV AFFECTED BY SUN SHUNTS HGV PARKED OPPOSITE OF ROAD.
10.	SLIGHT. 20/11/2005 AT 13:32 FINE, DRY, STREET LIGHTS PRESENT. MULTIPLE REAR END SHUNTS BETWEEN C1, C2, C3, C4.
11.	SLIGHT. 23/02/2006 AT 17:10 RAIN, WET, STREET LIGHTS PRESENT. MC HIT REAR OF STATIONARY LGV.
12.	SLIGHT. 03/05/2006 AT 15:00 FINE, DRY, STREET LIGHTS PRESENT. C1 COLLIDED WITH PEDESTRIAN.
13.	SLIGHT. 27/06/2006 AT 15:50 FINE, DRY, STREET LIGHTS PRESENT. LGV FAILED TO STOP, REAR END SHUNT C2 AND C3.
14.	SLIGHT. 24/06/2006 AT 08:18 FINE, DRY, STREET LIGHTS PRESENT. MC LOST CONTROL ON SPILLAGE AT JUNCTION.
15.	SERIOUS. 12/09/2006 AT 16:30 FINE, DRY, STREET LIGHTS PRESENT. C1 REVERSING BUT HIT PEDESTRIAN.
16.	SLIGHT. 15/09/2006 AT 15:40 FINE, DRY, STREET LIGHTS PRESENT. C1 FAILED TO GIVE WAY AT JUNCTION AND HIT C2.
17.	SLIGHT. 21/09/2006 AT 20:08 FINE, DRY, STREET LIGHT LIT. MC OVERTAKING C1 BUT LOST CONTROL AND SLID.
18.	SLIGHT. 11/10/2006 AT 07:55 FINE, DRY, STREET LIGHTS PRESENT PC REAR END SHUNT C2 WHILE TURNING.
19.	SLIGHT. 07/12/2006 AT 07:35 RAIN, WET, STREET LIGHT LIT. C1 FAILED TO GIVE WAY COLLIDED WITH MC.
20.	SERIOUS. 08/01/2007 AT 00:36 RAIN, WET, STREET LIGHT LIT. C1 LOST CONTROL AT RIGHT HAND BEND AND OVERTURNED.
21.	SLIGHT. 29/01/2007 AT 13:09 FINE, DRY, STREET LIGHTS PRESENT MC COLLIDED WITH C2 WHILE PULLING OUT OF JUNCTION.
22.	SLIGHT. 14/03/2007 AT 06:38 FINE, WET, STREET LIGHTS PRESENT. C1 DID NOT SEE MC AND COLLIDED AT JUNCTION.
23.	SLIGHT. 22/03/2007 AT 11:11 FINE, DRY, STREET LIGHTS PRESENT. C1 CLIPPED C2, LOST CONTROL AND CRASH INTO WALL.
24.	SERIOUS. 04/04/2007 AT 23:09 FINE, DRY, STREET LIGHT LIT. C1 OVERTOOK C2 BUT HIT C2 WHICH THEN SPIN & OVERTURNED.
25.	SERIOUS. 26/04/2007 AT 15:18 FINE, WET, STREET LIGHTS PRESENT. C1 OVERTAKING TRAFFIC BUT COLLIDED WITH ONCOMMING C2.
26.	SLIGHT. 09/05/2007 AT 02:25 RAIN, WET, STREET LIGHT LIT. DRUNKEN PC WAS HIT BY LGV.
27.	SLIGHT. 10/05/2007 AT 20:50 RAIN, WET, STREET LIGHT LIT. MC WAS STRUCK BY C1 FROM BEHIND.
28.	SLIGHT. 12/05/2007 AT 20:35 FINE, DRY, STREET LIGHTS PRESENT. C1 SPEEDING AND LOST CONTROL AT BEND.
29.	SLIGHT. 12/06/2007 AT 08:50 FINE, DRY, STREET LIGHTS PRESENT. REAR END SHUNT BETWEEN C1 AND C2.
30.	SLIGHT. 12/06/2007 AT 17:00 FINE, DRY, STREET LIGHTS PRESENT. REAR END SHUNT BETWEEN C1 AND C2.
31.	SERIOUS. 15/06/2007 AT 17:24 FINE, DRY, STREET LIGHT UNKNOWN. C1 OVERTAKING TRAFFIC HIT ONCOMMING C2, C3, C4.
32.	SLIGHT. 22/08/2007 AT 07:15 FINE, WET, STREET LIGHTS PRESENT. REAR END SHUNT BETWEEN C2 AND C1
33.	SLIGHT. 02/09/2007 AT 14:15 FINE, DRY, STREET LIGHTS PRESENT. C1 COLLIDED INTO REAR OF STATIONARY C2.
34.	SLIGHT. 30/10/2007 AT 19:00 FINE, DRY, STREET LIGHT LIT. REAR END SHUNT BETWEEN C1 AND C2.
35.	SLIGHT. 19/11/2007 AT 15:50 FINE, WET, STREET LIGHTS PRESENT. C2 COLLIDED WITH C1 WHILE BOTH DOING TURNING MANOEUVRE.

APPENDIX 3

Development site scheme

NOTES.

1. GENERAL

(i) The design is not to be scaled, work to figured dimensions and relative position only, confirm to designer

(ii) This drawing is to be read in conjunction with all relevant drawings, detailed specifications where applicable and all associated drawings in this series. (if any)

(iii) Any discrepancy on this drawing is to be reported immediately to the partnership for clarification.

(iv) The contractor is responsible for all temporary works and for the stability of the works in progress.

APPENDIX 4

TRICS data card – Business Park

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT
Category : B - BUSINESS PARK

VEHICLES

Selected regions and areas:

04	**EAST ANGLIA**		
	SF	SUFFOLK	1 days
05	**EAST MIDLANDS**		
	LN	LINCOLNSHIRE	1 days
	NT	NOTTINGHAMSHIRE	1 days
06	**WEST MIDLANDS**		
	ST	STAFFORDSHIRE	1 days
	WO	WORCESTERSHIRE	1 days
08	**NORTH WEST**		
	GM	GREATER MANCHESTER	1 days
10	**WALES**		
	CF	CARDIFF	1 days

Main parameter selection:

Parameter: Gross floor area
Range: 975 to 4823 (units: sqm)

Date Range: 01/01/99 to 17/05/07

Selected survey days:

Tuesday	2 days
Wednesday	1 days
Thursday	2 days
Friday	2 days

Selected survey types:

Manual count	7 days
Directional ATC Count	0 days

Selected Locations:

Suburban Area (PPS6 Out of Centre)	2
Edge of Town	7

Selected Location Sub Categories:

Industrial Zone	5
No Sub Category	2

TRIP RATE for Land Use 02 - EMPLOYMENT/B - BUSINESS PARK

User and Project Details

Project:	2845 – Mallingbrooks Site, Lancing
Title:	Proposed Business units - Lancing
Location:	Lancing Business Park, West Sussex
File name:	A259 Brighton Rd LinSig Model KA.lsgx
Author:	KA
Company:	Stuart Michael Associates
Address:	Coombe House, Coombe Square, Thatcham (RG19 4JF)
Controller:	Generic
SCN:	
Notes:

5.0	Summary	15

1.0 BACKGROUND

Introduction

1.1 Following consultation with the local highway authority West Sussex County Council (WSCC) a travel plan has been requested as part of the planning application for the proposed development. This would also form part of a Section 106 agreement

1.2 Due to the uncertainty of the travel requirements and patterns generated by the eventual occupiers of the proposed development, an interim workplace travel plan (WSCC publication "Business Travel Plans – Info Pack" refers) has therefore been prepared by Stuart Michael Associates on behalf of Manhattan Furniture Development (the 'Applicant') as part of a planning application to WSCC. This application includes proposals for 13 new business units to be located on an existing open space within the grounds of the Manhattan Furniture site.

Site Location

1.3 The proposed development is located within Lancing Business Park near the eastern edge border. The site has an established employment use (Manhattan Furniture Store) with vehicular access via Chartwell Road. Chartwell Road is linked with Marlborough Road forming a continuous loop around the Business Park.

1.4 The nearest bus stop to the site plus Lancing railway station are both within walking distance to the site, located to the south and north-east respectively.

Development Proposals

1.5 The proposed development comprises a mixture of B1, B2 and B8 use business units with floor spaces ranging between 63m^2 to 225m^2 in each unit. The gross site area would cover approximately 0.58 hectares and the units will comprise a total floor space of 1783.5m^2.

1.6 It is proposed that there will be on site parking spaces, including disabled spaces for each unit. Two cycle shelters with stands will also be provided within the site.

1.7 It is very unlikely that a single employer will occupy the whole of the proposed development. The developer of the site will therefore establish a management company to administer and operate the travel plan on behalf of the occupiers.

1.8 Since there is no standard format or content for a travel plan, each must be tailored to the specific circumstances of the site, such as size; location; number of staff employed; number of visitors; proximity to public transport and the number of potential deliveries into the site.

1.9 Within the context of the travel plan; and in parallel with the Transport Statement for the site, a package of appropriate measures would be identified to promote sustainable travel among the staff at the site, focusing on reducing the reliance on single car occupancy travel.

2.0 ROLE OF THE TRAVEL PLAN

Aims and Objectives

2.1 The aim of the travel plan is for every development that has the potential to have an impact on the existing traffic network to reduce the number of trips made by individual car travel.

2.2 Whilst a range of 'hard' transport measures have been proposed for the site (e.g. cycle shelters, footways) to encourage the use of non-car modes; 'soft' transport solutions such as this Travel Plan also need to be implemented to provide information and processes by which employees will be encouraged to travel in more sustainable ways (e.g. car sharing, walking, cycling, public transport).

2.3 To have a successful travel plan, it is vital that the overall aims and objectives of the travel plan are set in place at an early stage for the development. The key aims of this plan are therefore to:

- Minimise car borne traffic movements, thereby reducing congestion which makes the development more environmentally sustainable;
- Maximise accessibility to and from the development which will improve business performance and liveability; and
- Minimise development and business operating costs, which will improve profitability (i.e. walking, cycling, public transport, car sharing)

2.4 To complement the above aims, it is therefore important that a list of objectives are set to achieve these goals and to continue monitoring the progress of the travel plan. The objectives for the development are listed as follows:

- To promote awareness among the potential employers and staff on the various modes of travel available other than car;
- To implement suitable measures to encourage alternative mode choice;
- To influence travel behaviour towards more sustainable travel; and
- To create a more sustainable environment that would benefit both the local residents and the working public

2.5 These objectives will be achieved through a close coordination of measures and targets which will be monitored and reviewed periodically.

Targets of Travel Plan

2.6 As part of any travel plan, it is important that realistic, measurable targets are set for the proposed site.

2.7 Studies have shown that a good travel plan can reduce commuter car driving by between 10% and 30% (**Department of Transport (DfT) – The Future of Transport, July 2004** refers). This figure has the potential to remove a significant number of trips that are currently experienced on the local road network and reduce congestion at a number of key junctions in the area.

2.8 A target of 15% reduction in trip generation has been set for the site, as identified with the local highway officers within WSCC. It is anticipated that the travel plan will run for a period of 5 years following first occupation and will be monitored annually over the plan period. This will be an on-going process enabling changes to be made to reflect the outcome of various monitoring exercises and any subsequent review of targets.

2.9 The above figure is considered acceptable and realistic based on experience from existing travel plans which shows that a 15% reduction in car driver trips is achievable (DfT – The Future of Transport, July 2004 refers).

2.10 As the proposed development site would include different land uses (B1, B2 & B8), it would be appropriate to measure the targets set in terms of the number of commuter cars arriving per 100 employees. This method has the benefit of being able to judge the progress over time even when the number of employees fluctuates.

Benefits of Travel Plan

2.11 There will be many benefits gained from the implementation of a successful travel plan when targets and objectives are achieved, such as:

- Social inclusion – A successful Travel Plan improves travel choice and site permeability, thereby reducing congestion and supporting more reliable means of transport. This would reduce delays to deliveries and movements of goods off site;

- Environment – The reduction in vehicle movements associated with the site would improve air quality, whilst also reducing noise levels around the site. This would also reduce the impact of wider environmental problems such as global warming;

- Health – A successful Travel Plan that encourages sustainable transport would help to improve employees health, reduce absenteeism and reduce stress when commuting to work;

- Image – The plan would also provide a better experience for visitors and customers travelling to the site based upon the reduced number of car borne traffic movements within close proximity to the site;

- Costs – Savings on providing and maintaining parking spaces would assist with recruitment and retention of employees by making their journeys to work easier and cheaper, and improve staff punctuality; and

- Future growth – Having a successful Travel Plan in place can enhance the potential for further site expansion to be accepted by the local highway authority.

3.0 COMPONENTS OF TRAVEL PLAN

3.1 A travel plan is an on-going process that requires regular monitoring and reviewing. To make this a success, it is proposed that the applicant would either designate an employee or appoint a consultant to act as the Travel Plan Co-ordinator (TPC) for the site.

3.2 The following components of the travel plan will act as a framework which will be finalised in consultation with the local highway authority prior to occupation of the site.

3.3 There are a number of key responsibilities for the TPC to apply to the site when implementing the travel plan. The TPC will coordinate the implementation of a number of measures to promote and enhance the sustainable travel arrangements associated with the site.

3.4 It will also be the responsibility of the TPC to act as the first point of contact for employees; the local highway and planning authorities; and local interest groups to liaise with regards to the site wide travel plan. The TPC shall also be responsible for:

- Overseeing the development and execution of the travel plan;
- Provision of information to occupiers of the site throughout occupation;
- Coordinate the subsequent monitoring of the scheme as detailed above; and
- Designing and implementing effective marketing measures and campaigns to raise awareness of the travel plan using methods such as public transport and cycle discount vouchers for employees or bike to work week

3.5 Prior to the site being occupied, the TPC will also be responsible for collecting data about transport provision for each mode to the site (site audit) and inform potential employers of a travel plan scheme. A staff travel survey will be undertaken once the development is 75% occupied to ascertain the origin, behaviour and mode of travel adopted by employees of the site.

3.6 The Travel Plan Co-ordinator will organise regular meetings to be attended by a representative from each occupying business, in order to communicate successes or failures of the travel plan, and to discuss appropriate actions to be taken to help achieve the targets that have been set.

3.7 The travel plan would comprise of a number of essential measures with the aim of achieving a change in travel behaviour. These measures should work in tandem to attain the maximum impact. The following sections will highlight the various measures intended to change the travelling patterns (car travel) among the staff commuting to and from the development.

Walking and Cycling

3.8 PPG13 recognises that walking and cycling are effective modes of travel in terms of short trips and has the potential to replace many car trips that are under 2km (walking) or 5km (cycling).

3.9 Walking and cycling are excellent ways to keep fit and they can avoid traffic jams and make journey times more predictable. This will help to improve the general well being of employees and reduce absenteeism, at the same time improve punctuality.

3.10 Both walking and cycling can form a significant proportion of journeys to work as the site benefits from its close proximity to various services and public facilities. This is identified within Figure SMA2 of the Transport Statement which indicates that the site is within the recommended distances as identified in PPG13.

3.11 With many cycle-friendly routes and facilities (i.e. Advanced Stop-Line) available in proximity to the site, the potential for cycling is high. It is also proposed that the provision of two secure cycle storage shelters within the site will also encourage employees to cycle.

3.12 In addition, there is potential for each business unit to provide shower and changing facilities as an incentive for employees to cycle. By offering interest free cycle loans, discounts on cycle accessories or a cycle mileage allowance, employers could further promote the benefits of cycling to work.

Public Transport

3.13 Based on the National Census (2001), the proportion of working adults (16yrs-74yrs) in South Lancing commuting to work by bus is only 4%. This is currently lower than people commuting by foot (8%). This data also identifies that the majority of people (60%) tend to commute by car.

3.14 Notwithstanding that, the site is situated within close proximity to the bus stop and Lancing railway station, which provide easy and direct access to the site.

3.15 There are several common barriers to using a bus and rail to commute, such as a lack of readily available information; infrequent or unreliable service; high fares; lack of bus-bus or bus-rail connections and long indirect walking access to these public transport facilities. To overcome these obstacles, distributing free public transport information such as bus and train timetables and route maps could help persuade employees to switch from their usual mode of travel. Additionally, providing information on the nearest and quickest route to the bus stop and train station from the site could further enhance this initiative.

3.16 Public transport operators are increasingly aware that a workplace travel plan offers a valuable means to promoting their services and potentially increasing their patronage. By liaising with the local operators, discounted ticket deals for employees can be an attractive incentive to encourage modal shift from the private car to public transport which can be in the form of annual season tickets to daily single fares.

3.17 The developer could also liaise with local bus operators to increase their frequencies during peak hours, for example 07:00 to 09:00hr and 16:30 to 18:00hr by subsidising the additional services. This would help to promote the image of bus travel among the staff and increase the level of patronage for the bus operators.

3.18 Essentially, these initiatives aim to offer drivers an alternative and attractive option for commuting to work. Most importantly, by influencing and changing drivers poor perception of commuting by public transport to having a stress free and reliable journey would help to ease parking pressures on site.

Car Sharing

3.19 Car sharing, in its simplistic term is when a car is occupied by two or more people travelling together to work or on company business. Car sharing in particular has been highlighted by the DfT as beneficial in closed communities such as the workplace, and this initiative has established a modal shift where piloted in other areas of the country.

3.20 West Sussex County Council already promotes a car share scheme within the county industrial estates and business parks. The WestSussexCarShare.com website has been set up which links to the County council website linking directly to their database. This provides a quick and easy means of finding someone with similar trip ends and times. The database is only accessible to registered individuals and information is stored in accordance with the Data Protection Act.

3.21 The database contains destinations to large employers, industrial, business and Science Park in the county. Lancing Business Park is part of this car share scheme.

3.22 Various incentives to promote the idea of car sharing include provision of priority parking spaces for car sharers; offering a guaranteed ride home by taxi within a reasonable distance and cash allowance to car sharers.

Car Parking

3.23 Management of car parking is a vital part of a workplace Travel Plan. Various measures can be implemented in managing this such as restricting the number of parking spaces on site; parking charges; and setting a parking permit system; each of which aim to discourage the use of the private car. In addition, providing dedicated bays for employees participating in the car share scheme would complement the above measures.

3.24 With regards to the proposed development, the site will provide sufficient staff and disabled parking bays and is in accordance with the current Parking Standards identified by WCSS. However, the Applicant has taken a positive step by providing half of the existing number of spaces (70 spaces) in the new scheme layout. The proposed car park will only provide 35 spaces in a barrier operated car park. It is envisaged that an unused car park located south-west of the site would act as an overspill if required.

Reducing the need to travel

3.25 The implementation of flexible working hours is also helpful in reducing the impact that a particular site will have on the existing highway network; particularly during peak hours as this will disperse the peak periods.

3.26 Home working or teleworking initiatives also enable employees to work away from office, thereby reducing the need for parking spaces, reducing the number of commuting trips, saving petrol and travel time, and in some cases increasing employee productivity.

3.27 SMA understands that as part of the development proposals there shall be a canteen located on site. A mobile coffee van is also available at the unused car park within close proximity to the site throughout the day. It is anticipated that these facilities will greatly help reduce lunchtime car use during the lunch period.

Visitors and Deliveries

3.28 It is anticipated that the development would attract a certain level of non-staff traffic into the site due to the type of services it will provide. Although it is not within the control of the TPC to know the travel choices of the visitors, a number of measures would help to

influence their choices by providing information on various means of travel other than the car. Some useful measures could include:

- Providing directions to the site by walking, cycling and public transport - including route maps, timetables and travel advice readily available on a public website;
- Providing an operator phone service to cater for any questions or queries; and
- Introducing a charge for visitor parking if necessary with advance notification

3.29 Delivery trips made by suppliers to the site can also be reduced by placing centralised orders and arranging a fixed date and time for delivery on a regular basis (i.e. paper, drinking bottles).

4.0 MARKETING AND MONITORING

Assessing the Travel Plan

4.1 Once the travel plan has been implemented, it is vital that the Travel Plan Coordinator keeps a regular check on progress towards meeting the targets that have been set. It is also vital that in order to assess the effectiveness of the transport measures provided, the TPC must also consider the appropriate monitoring for the site.

4.2 As part of the continual monitoring process, the TPC will undertake an annual staff survey to evaluate the effectiveness of the travel plan, and produce a written report to be submitted to the Council for their approval.

Raising awareness and marketing

4.3 One of the main concerns that would determine the success or failure of a travel plan is staff awareness, participation and acceptance of the scheme. It is therefore anticipated that a marketing strategy is produced to accompany the plan to ensure that these barriers are overcome and all aspects of the travel plan are effectively communicated to the employees and visitors of the site. The marketing campaign for the development would include the following means:

<u>Publicity and travel awareness</u>

4.4 To raise staff awareness of a travel plan scheme, visual communication would be necessary at the workplace and in public spaces around the site. A variety of printed information, such as posters; leaflets and free promotional gifts (i.e. mouse mats and pens) should be distributed to all businesses occupying the site on company notice boards and in common rooms.

4.5 To accompany the travel plan, an induction would be carried out by the TPC for the employer and employees of the site which would inform employees of the possible transport choices and try to encourage sustainable travel where possible.

4.6 A package of the latest travel information on alternative modes of travel would be distributed freely to each business units upon first occupation of the development, which would also include pedestrian and cycle route maps, as well as bus and rail timetables. This information would also be readily available within the site canteen.

4.7 These initiatives would be an excellent way to generate early staff involvement and maintain staff awareness and interest during the implementation phase of the travel plan.

Staff travel plan pack

4.8 The travel plan would be tailored according to the travel needs of the site. Staff will be able to identify the key objectives and aims of the travel plan; the initiatives proposed, and useful local information on sustainable travel modes. This would include:

- Background information of the site such as site location; the availability of pedestrian or cycle friendly facilities within or surrounding the site; a local street map detailing the services and facilities in Lancing, and public transport information and route maps;
- A summary report of the travel plan objectives and initiatives, and highlight the aims to be achieved so that these are made aware and be a constant reminder for all staff;
- Information relating to cycle training, cycle proficiency test; and
- Details of car clubs and car share databases and forums, and Bike User Group's (BUG's)

Promotion

4.9 To discourage the use of travel by car or even single car occupancy, a series of incentives would be in place to promote sustainable travel. These include the following:

- Negotiation with public transport operators to offer staff discounts for peak hours travel (i.e. season ticket holders);
- Discounts on purchasing bicycles and cycle accessories with a staff pass;
- Cycle allowance for employees that cycle to work;
- Discounts on footwear for those who walk to work;
- Provision of shower/change/locker facilities;
- Subsidising taxi fares in emergency or staff working overtime;
- Liaising with a car club operator to operate within proximity of the site; and
- Incorporate national events like "Bike2Work" and "Car-free days" for the site.

The internet

4.10 A community web site for the development will be available for all units with easy access onto the WSCC CarShare site which promotes and encourages car sharing to West Sussex workplaces. Latest update on public transport information for any disruptions to rail or bus services will also be provided. Direct links to national and local public transport websites (i.e. Traveline, National Rail Enquiries) could also be available.

4.11 News and results of the travel plan scheme will be publicised to all staff as a form of motivation and keep them updated of the progress. Events or activities to promote sustainable travel in line with national events and campaigns such as “Bike2Work” or “Car-free days” would also help spread the message across which will enable staff to feel that they are contributing to something beyond the development.

4.12 Online travel information such as directions and availability of various transport modes to the site would be available for the public on the website. This information would also be readily accessible from the WSCC web page and updated regularly.

4.13 Staff and employers will have access to the internet within their business unit.

Internal Publications

4.14 Work place notice boards would be used as a convenient means for displaying information relating to travel initiatives, offering travel discounts and the promotion of sustainable transport and local cycling, walking events. Local street maps, and bus and rail timetables would also be available.

4.15 There is also potential for the above information to be printed in monthly newsletters and distributed free to each unit. To assist with setting future travel plan initiatives, a feedback column could also be provided to employees to assist the TPC in implementing new travel plan measures if necessary.

Monitoring and Review

4.16 The travel plan has a clear objective to deliver a modal shift of 15% in travel behaviour for the site. It is, therefore, critical that monitoring on employees travel behaviour is measured in order to assess progress towards meeting the travel plan objectives set by the TPC.

4.17 The monitoring will be carried out on a regular basis, to achieve the target of a 15% reduction in trip generation for a period of 5 years after occupation of the development. When required by WSCC, a review of the travel plan could be undertaken during the first 6 months after the development is in operation.

4.18 The monitoring process would include the following:

- A modal-spilt survey for staff and visitors commuting or visiting the site during the peak hours of the day;
- A full staff travel questionnaire to be conducted at the same time each year to gauge staff awareness and reactions;
- A regular manual classified traffic counts of vehicles entering and exiting the site, including cycles and pedestrians, and fleet vehicles;
- A monthly count on the number of bicycles at cycle stands on the same day of each month;
- A monthly count of site parking spaces on the same day of each month and observe any overspill parking onto the neighbouring car park;
- Monitoring the patronage level of public transport on a monthly basis; and
- Maintaining the number of employees on the site that car share via a car share database or members of a car club.

5.0 SUMMARY

Summary View

5.1 This report has identified the outline proposals that would form the Workplace Travel Plan (WPTP) for the Manhattan Furniture Development. The measures would be integrated with the existing public transport and sustainability strategies currently in place within the area, and would provide new 'soft' measures to complement the 'hard' infrastructure measures proposed for the site. A range of incentives would also be offered aimed at increasing awareness of sustainable transport modes. The measures to be implemented would also be subject to detailed monitoring and review.
