Dear Sir/Madam,

Further to the pictures sent to you on the 20th February to show the continued waterlogging on the site for the above application, please see pictures taken today, 8 days later where nothing has changed other than the water pools are now starting to gather green algae. It is now over 5 weeks since the tanker lorries left the area and still the proposed development site is not clearing of ground and surface waters.

Once again, this shows the fragility of the drainage in this area and underpins the local residents' concerns for exacerbated flooding issues if the above site is developed, or indeed any further part of this very sensitive flood plain.

Copies of this email have been sent to West Sussex, the Environment Agency, Southern Water and the drainage team at Adur DC.

Yours faithfully,

Bill Freeman
