Subject: Compass Travel, Northbrook College, Goring - AWDM/0068/25

I refer to the above application and the Air Quality Report prepared by Redmore Environmental dated 1 July 2025 (ref 5051 - 3r1) in support of the above application.

As the report states, a three month period of air quality monitoring was completed to determine the levels of Nitrogen Dioxide (NO2) and Particulates (PM2.5 and PM10) experienced in the vicinity of the site.

The report compares measured data with existing England air quality Objectives/Target Values which I will not repeat here. The assessment annualises the measured data in accordance with Defra Technical Guidance TG22.

The assessment concludes that all relevant objectives and target values are achieved. The measured values broadly align with those we have measured in Worthing (e.g. the annual mean for PM2.5 measured at Grove Lodge in 2024 was 7.7µg/m3 compared to their level of 6.94ug/m3).

The previous air quality assessment concluded that the objectives and target values will not be exceeded and this assessment would appear to confirm this conclusion. Therefore I make no further observations in this respect.
