Trees & Gardens

Key tree age
- Semi mature= Up to ¼ of expected life span
- Young mature= up to ½ of expected life span
- Mature= above ½ of expected life span
- Veteran= Great age with high local or biological significance

Key
- **CL**=crown lift
- **BI**=bark inclusion
- **DW**=deadwood
- **M**=meters
- **NRF**= No recordable features

Date: 15.10.2026 Client: Richard & Ann Warner Client's brief: Tree large for garden and growing towards house Site address: Bishops Garth, South street, Tarring, BN14 7NL GPS location of tree-	Site conditions: Private garden Single tree. On private land but with no public access underneath crown
Species: Sycamore Tree number: T1 Height: 7.5 Age: Mature	Crown spread: North: 2.75m East: 2.75m South: 2.75m West: 2.75m 
Twigs and leaves:	When observed on previous visits during summer the tree had good vigour.
Branches:	Heavily altered crown. Historic pruning/Pollarding down to 4m from ground level.
Stems:	NRF
Trunk:	Pruning wounds at 4m height, heavily altered crown.
Buttresses:	NRF
Roots and ground:	NRF
Conclusion: Work required:	This tree has been pruned and pollarded many time due to its location next to a grade 2 listed building. Due to the trees size and growth potential it should be reduced so as not to interfere with listed building. Continue with scheduled reductions every 4-5 years. This has now become due and could be done this winter. **Current dimensions** 5.5m crown spread North to south 5.5m crown spread East to West 7.5m height **Dimensions after pruning** 2.5m crown spread North to south 2.5m crown spread East to West 4m height

When to re inspect:	Reinspect in 4 years unless tree health declines
