How does the barrier work?

Using the force of floodwater to to stop it entering your property

The Floodshield Door Barrier is crafted to protect the single inward opening doors of your property against water intrusion. It functions on a straightforward yet profoundly effective concept: using the pressure of floodwater to form a strong, watertight seal around your door to block floodwater entry. Distinguished by its simplicity of deployment and the extensive protection it provides, this barrier is an essential component in your arsenal for flood defence.

How does the barrier clip in place?

Effortless installation, no need for tools, permanent alterations, or technical expertise

The barrier includes adjustable clips that firmly fasten to the flat exterior of your door frame. These clips are engineered to fit a broad spectrum of door dimensions and designs, guaranteeing a tight seal essential for efficient flood defence. Tailoring the clips to match your door's specifications is simple, ensuring the installation is swift and hassle-free.

How does it stop water entering the property?

A watertight seal with the door frame sealing off any possible entry points

This sealing capability is a result of the barrier's design, incorporating a pliable yet resilient material that moulds to the unique contours of your door frame, leaving no space unsealed. The increasing pressure from ascending floodwaters intensifies the seal's firmness, adding an extra safeguard to maintain your property's dryness.

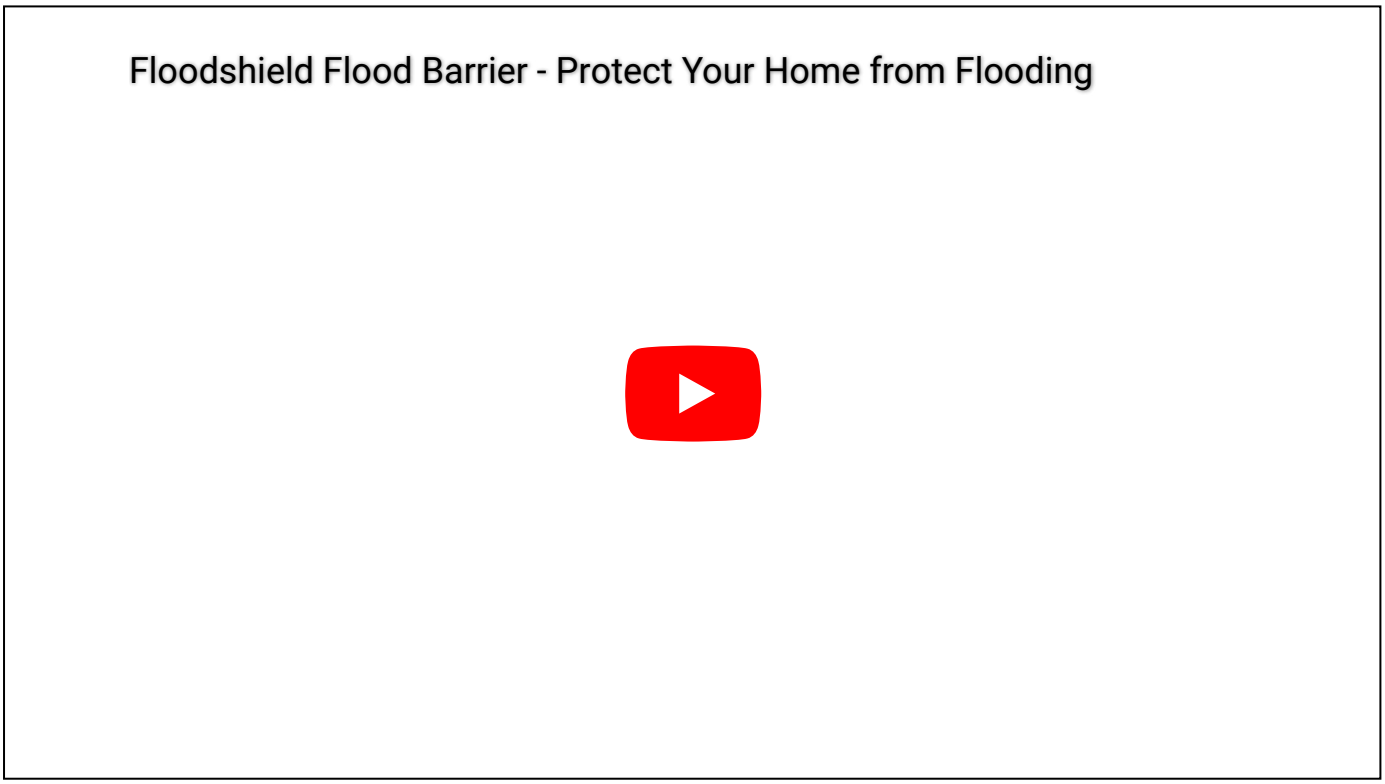
Watch the Floodshield in action:



Quick installation steps

Prepare the Barrier:

Begin by adjusting the clips on the Floodshield Barrier to match the width of your door frame.

Position the Barrier:

Hold the barrier against the door frame, ensuring that it's level and covers the entire opening.

Secure the Clips:

Press the clips firmly into place against the door frame, making sure they are tightly fastened and the barrier is securely mounted.

Check the Seal:

Once installed, inspect the seal around the entire door frame to confirm there are no gaps or loose areas.

Will the barrier fit your door?

Floodshield door barriers come in 6 standard width and is designed for standard single, inward opening doors, working best with frames in good condition.
