Approximate Tree Dimensions

Width from crown center

North: 3m East: 4.5m

South: 2m West: 2m

Height 5.5m

The tree has a 10-degree lean to the east with the vast amount of the crown heading in the same direction, towards a neighbouring fence line. There are a number of inclusions at crown brake, prominently on the east side. There is an old wound at the base on the east side with a large cavity heading under the main stem. There is also loose flaking bark around the base on the west side.
