A warm welcome...

to our world of windows

Give your home a fabulous facelift and save money on your energy bills with brand new windows from Anglian, the experts in quality home improvements with a history that goes back over 55 years. They'll breathe fresh life into the look of your home – and we've got window styles that'll be just perfect for you, whatever style of house you live in, and a great choice of materials, colours and finishes too.

But new windows aren't just about fantastic looks. You can say goodbye to regular maintenance, farewell to peeling paint and rot and hello to virtually maintenance free double or even triple glazed windows.

And that means real money savings too as you could see a dramatic reduction in your energy bills. In fact, your new windows could even help generate heat in your home.

with...

Anglian Home Improvements

"The new windows have made such a difference. I think everyone on the street would like some."
Mr & Mrs N, Kent

The selection of styles, colours and finishes from Anglian seamlessly complements house design and décor. The choice is simply outstanding, with quality and performance to match.

30

A better class of window...

made by the experts

At Anglian, we are one of the leaders in PVC-U window technology. We have been building a reputation for designing and manufacturing some of the country's best selling windows since we started in business in 1966, and we continue to raise the standard.

One of the many ways in which we are different from less experienced companies is that we make all our Stormproof casement windows ourselves using the most up-to-date PVC-U technology. That's all the way through from manufacturing the extrusions in our own plant from PVC-U granules, to design, building and assembling the windows ourselves and even manufacturing the glass units. What's more, all our PVC-U casement windows are made here in Britain. And that means quality, looks and design for security, warmth and peace of mind.

Take a look over the next few pages to find out more and open up to perfection in windows.

Every single Anglian window is made to measure to ensure a perfect fit, and installed by our highly experienced and trained installers who are dedicated to doing a high quality job.

Whether you choose casement windows, our Classic or Elite Sliding Sash, or our tilt and turn styles, traditional finishing touches and fine attention to detail always come as standard

A warm welcome...

to our wooden windows

Our Heritage collection of wooden casement and sash windows add character and kerb appeal to any style of home, especially period properties.

We've combined the best of traditional joinery with the latest in manufacturing techniques so you can enjoy the outstanding look of real timber windows and a home which feels snug and secure.

With an exceptional range of authentic finishes to choose from, every double-glazed and fully furnished wooden window is designed and crafted in collaboration with you. Every piece is manufactured to your specific requirements and each window is installed by the expert Anglian team. This means your Heritage wooden windows will fit perfectly, complement your home beautifully, and come with the performance and service you'd expect from us.

Heritage
TIMBER COLLECTION

Heritage

TIMBER COLLECTION

Double glazed, factory finished and with security locks, our beautiful wooden windows have come a long way from the rotting and peeling windows of old.

Sleek and slender style...

achieved with aluminium

Take a look at aluminium windows. Aluminium alloy has been used for decades as a window material. With low maintenance, no warping or corrosion, they are a long lasting, cost effective choice. There's a great selection of colours too and their slender sections make them a very attractive alternative for any home.

As you would expect, we have taken great care to create a sleek and modern looking window that offers good thermal properties and long term durability. And because every one is double glazed, anodised and powder coated, they are very low maintenance, high performance windows.

Security locks come as standard with aluminium windows, while their sleek lines make for a very attractive looking combination.

Take a second look...

at reducing draughts and noise

Anglian are the experts in fitting secondary glazing to existing windows, whatever their size or style. After all, secondary glazing was one of the first products we made over 55 years ago!

Secondary glazing is an easy option if you want to reduce draughts, heat loss and noise without replacing your windows. This is a great option if you live in, for instance, a listed building or cannot make changes to the exterior of your property.

Our secondary glazing is really easy to use: it slides open and shuts easily to keep the heat in and the cold out.

And because it is all made specifically to fit your existing windows, the sight lines inside make it a completely unobtrusive improvement to your home.

Make it yours...

and enjoy a cheerier exterior

With Anglian, there really are so many ways you can personalise your window installation. And it only starts with the choice of material that we've shown you on the previous pages!

You can also select from a range of colours and finishes, different styles and shapes and simply loads of finishing touches that will make your installation unique to you – like glazing options, window furniture and even performance options.

We're here to advise you all the way. So just ask us and we'll guide you through the selection process so you end up with a home that looks spot on – just for you.

PVC-U window styles
Casement Windows

Stormproof Double Glazed Casement

Casement windows are our most popular design and you'll see them on houses of all types and ages all over the country. And, of course, there's a great choice of classic casement window styles to choose from. Both side hung and top hung casement options are all available in a host of glazing possibilities and colour finishes. As standard, these windows are A rated, but you can also upgrade to the sensational A+ rated windows that help to harvest and retain even more of the sun's free energy.

Secured by Design
SBD
Official Police Security Initiative

Stormproof Triple Glazed Casement

Our energy efficient triple glazed windows are almost indistinguishable in looks from the double glazed casement windows featured above. This means you can mix and match the windows around your home to suit the aspect of the room and how you will use it. These A+ rated casements can be added where you want to keep in even more heat or need a greater level of acoustic performance. The triple glazing also makes them harder to break, adding an extra level of security.

Secured by Design
SBD
Official Police Security Initiative

Flush Finish Casements

Our new flush finish casement windows replicate the traditional clean line appearance associated with historic timber windows but are expertly manufactured in fully-foiled PVC-U to be stronger, longer-lasting and easier to maintain. They look equally stunning on both older or more contemporary properties and are available in a choice of A+ double or A++ rated triple glazing. These windows attain the highest levels of energy efficiency and achieve the UK police initiative 'Secured by Design' standard for extra peace of mind.

Secured by Design
SBD
Official Police Security Initiative

Bay Windows

Eye-catching bay windows help to bring light and space to a room and add real curb appeal to your home.

All our bay windows are made to match the other windows in your home and are available in an enormous range of styles, colours and configurations. So whether it is a splay bay or square bay – we can help!

Tilt & Turn

Our Scandinavian inspired tilt and turn windows combine an ultra-modern look with great performance in double or triple glazed options*. The simple 'tilt and turn' operating system gives you the choice of tilting open the window from the top and letting in a light breeze – or opening it the whole way using the side hinge if you really want the summer sun to flood in. Plus being able to open them from both the top and the side makes them incredibly easy to clean!

PVC-U window styles

Classic Sliding Sash

Finding a way to sympathetically replace timber sash windows on Georgian or Victorian style homes is often a big concern. But you don't have to choose between maintaining the building's historic character and staying warm. Our A+ rated as standard PVC-U Classic Sliding Sash windows offer the best of both worlds. They are designed to replicate the classic look of traditional timber sashes, while incorporating 21st century security levels and an outstanding level of thermal efficiency.

Mitred welded profiles provide strength and durability.

Chamfered beading profile featuring an ovolo glazing bead.

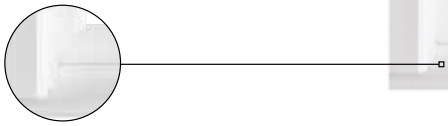

Classic furniture available in white as standard. Option to upgrade to gold or chrome.

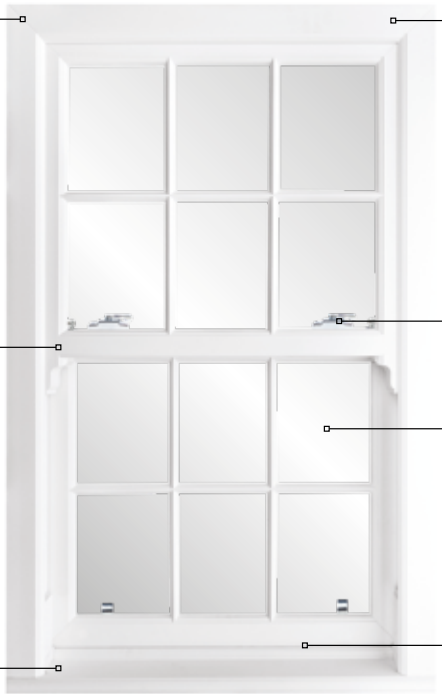

Decorative horns are available as an optional upgrade and come integrated into the frame as a continuous feature.

Toughened glass is fitted as standard in both the top and bottom sashes.

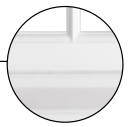

Security bar; this specifically designed feature is an integral part of the window sill which significantly increases security, to help prevent potential intruder attack.

Energy rated 'A+' as standard for modern energy efficiency levels.

A+

Standard bottom rail of 60mm.

Elite Sliding Sash

Our Elite Sliding Sash window offers all the benefits of our Classic Sliding Sash window but with innovative design features added to further replicate the authentic detail of original Victorian sashes. The traditional lines, subtle textured finish and decorative features all provide an exceptional level of authentic detail as standard. With an energy rating of A, these windows provide an incredible level of thermal efficiency and include high-level security features for complete peace of mind. This seamless blend of old and new has been created by Anglian to help allow these PVC-U windows to be installed in conservation areas, protected sites and buildings with an Article 4 directive.

Equal glass heights and widths included as standard for improved aesthetics

External sash profiles chamfered to recreate the look of a traditional putty line and internal Ovolo bars included to complement the sash bead detail

Mechanically butt jointed profiles and staff beading recreate the framework of traditional sashes

Elegant furniture options available in chrome and gold as standard

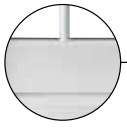

Innovative slimline meeting rail (39mm) provides authentic timber visuals and sightlines

Authentic butt jointed decorative horns included as standard

Steel reinforced sashes achieve the Secured by Design standard without compromising on appearance

Deep bottom rail of 105mm included as standard to replicate original Victorian designs. Also available in 65mm.

Energy rated 'A' as standard for modern energy efficiency levels

Secured by Design
SBD
Official Police Security Initiative

Flying Mullion

A mullion is the vertical member on to which the casements close. A flying mullion, however, is an integral part of one of the casements so that, when both casements are open, you have a clear and unimpeded view of the outside. When closed, it resembles a standard casement window and locks securely in place. Flying mullions on windows were first introduced as a means of fire escape and, although they can be used for aesthetic reasons, their principal purpose is still one of safety.

Aluminium window style

Casements

We can supply aluminium casement windows in any configuration to suit any style of property.

They are all individually made and bespoke to your home. Styles include plain casement or internal Georgian bar designs.

They are renowned for being secure and robust. And with the added benefits of being double glazed for warmth and polyester powder coated, they won't warp and have an attractive, long-lasting finish.

Wooden window styles

Flush Finish Casement

For an extremely authentic look, particularly suited to older properties, all sashes are designed to sit completely flush with the window frame when shut and are hinged to open outwards, as either top hung or side hung vents. Weatherproofing keeps the draughts out, and the option of restrictor hinges can be selected for modern day safety and security. Despite the traditional appearance of our flush finish casements they still achieve a very modern energy efficiency of A-rated as standard, so you stay cosy even on the chilliest days.

Stormproof Casement

These windows are designed with performance in mind and are often suited to more contemporary homes. While they sympathetically replicate the look of traditional timber casement windows, the frame is double rebated and the casement stands proud. This creates an overlap when the window is closed which provides additional protection against the weather and helps keep draughts at bay. The windows open outwards as either top hung or side hung vents and achieve an energy efficiency rating of A as standard.

Sliding Sash

Traditional wooden sash windows originated in the 17th century. We're proud to be maintaining this element of our heritage while enabling homeowners to feel more snug and secure.

Each of our wooden sliding sash windows are individually made with your choice of frame and glass.

They combine the natural beauty of real wood with the modern performance features that make them smooth to open and draught-free when closed.

Secondary Glazing styles

Side Hinged

If you already have single opening casement windows, we can make you a hinged secondary glazing unit to help keep your home quieter, warmer and draught free. The extra layer of glass will also make your home safer from intruders, as it's harder to break-in.

These will be fitted by expert installers who'll take the time to show you exactly how to operate them.

Vertical

Adding secondary glazing is a great way to keep warm and to help shut out the noisy outside world. It's especially effective if you can't replace your existing windows because you live in a listed building or a conservation area.

For example, if your home has original sliding sash windows, we can make you a vertical sliding unit. These operate with spring balance so they can be easily opened and they also have a tilt facility, which makes them easy to clean.

Horizontal

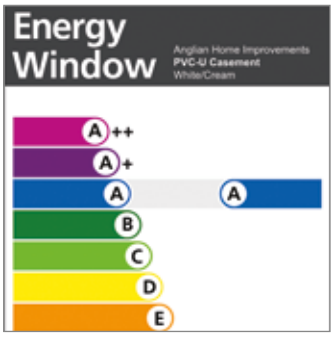

Every one of our secondary glazing units is built individually by our skilled craftspeople in our UK factory. You can be confident they are not only of the highest quality, but will fit your existing windows perfectly, whatever their shape or size.

If your existing windows open horizontally we can make matching units for between two to five casements. And all the panels slide, which makes them really easy to open and close.

Energy efficiency...

helping reduce your fuel bills

Window design, and the technology behind window manufacture, has developed at an amazing rate over the last couple of decades.

One of the most significant changes has been in thermal and energy efficiency, in other words, how windows keep the cold out and the warmth in, how well they do that and therefore how much energy and money you can save as a result.

How a window is rated...

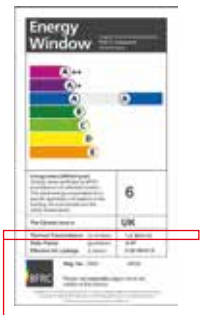

for energy efficiency

Our windows are independently assessed by the British Fenestration Rating Council (BFRC). This gives a numerical rating in kilowatt hours per square metre per year (kWh/m²/year), which translates to an A++ to E rating. The BFRC scheme is Britain's nationally recognised system for rating the energy efficiency of windows and is recognised within the Building Regulations as a method to show compliance for replacement window installations.

The energy index is an important factor, indicating the amount of energy lost or gained by the window. The value is displayed in kilowatt-hours (kWh) per square metre of glazing (m²) per year. A positive value indicates that the window lets more heat in through the glass, than is being lost out through the window. The higher the number, the greater the energy savings.

BFRC Rating Scale	BFRC Rating (kWh/m²/year)
A++	20 or greater
A+	10 to 19
A	0 to 9
B	-1 to -10
C	-11 to -20
D	-21 to -30
E	-31 to -40

Three key performance factors for energy rating:

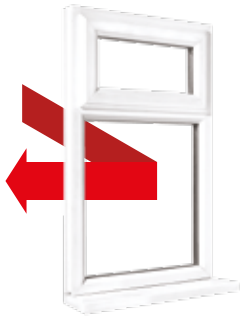

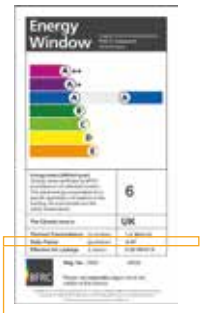

Thermal Transmittance (U window) 1.4 W/m^2.K

1. Thermal Transmittance

This measures how good a window is at preventing heat from escaping from inside the building. The lower the transmittance value, often referred to as the U-value, the better the product is at preventing heat loss.

The lower the U Value, the warmer your home will be.

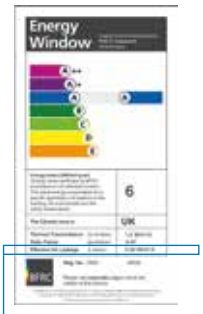

Solar Factor (g window) 0.47

2. Solar Factor

This measures the amount of heat gained from sunlight passing through the glass. The solar factor is expressed as a number between 0 and 1. The more transparent the glass, the higher the solar gain. The higher the number, the better the window is at capturing the sun's heat particularly during the winter months.

The higher the G Factor, the more free energy you harvest.

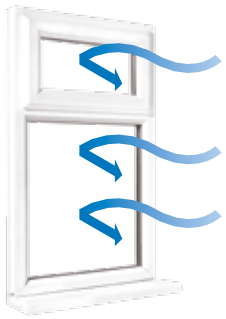

Effective Air Leakage (L factor) 0.00 W/m^2.K

3. Air Leakage

This measures how 'air tight' the window is. A lower air leakage number means less air leakage through the window from the outside when the window is shut. In other words, it is less 'draughty'. Less air leakage equates to less heat escaping.

The lower the L Factor, the less draughty your windows will be.

The combination of all three factors provides you with the overall Energy Index and your overall energy rating.

Saving you money...

and using less energy

Save money

By using the energy calculator developed by the Glass and Glazing Federation (GGF) – the leading trade federation in the glass and glazing industry – we are able to calculate the potential cost and energy savings for a property if the windows were upgraded from pre 2002 double glazed PVC-U windows to new A rated PVC-U windows from Anglian.

Taking the figures of a typical house, similar to that illustrated below and as defined by the GGF, fitted with pre 2002 double glazed PVC-U windows and those windows are replaced by A rated double glazed PVC-U windows from Anglian, you could save up to £184.25* per year in energy costs, which equates to 0.47 tonnes of CO_2.

Environmental savings too

By consuming less energy, you are also helping the environment, as using less energy means fewer CO_2 emissions.

The size of CO_2 emissions is hard to visualise but 1 tonne of CO_2 is equivalent to driving 6000km in a diesel car – that's from London to Greece and home again!†

We also play our part, as members of Recovinyl Plus, an initiative of the European PVC industry who monitor and verify the recycling of PVC waste, helping us to improve our production processes, minimise our emissions and boost the collection and recycling of our waste.

A typical house upgrading from **pre 2002 double glazed PVC-U** windows with gas heating to **Anglian A rated windows.**

£184.25*
0.47 tonnes CO_2
Annual Saving

£1842.50
4.7 tones CO_2
10 Year Saving

Figures correct at time of going to press.

*Source Glass and Glazing Federation. A typical detached house has 23.7m2 of windows. Based on replacing PVCU double glazed windows with a 12-14mm sealed unit and gas central heating with A Rated thermally efficient windows.

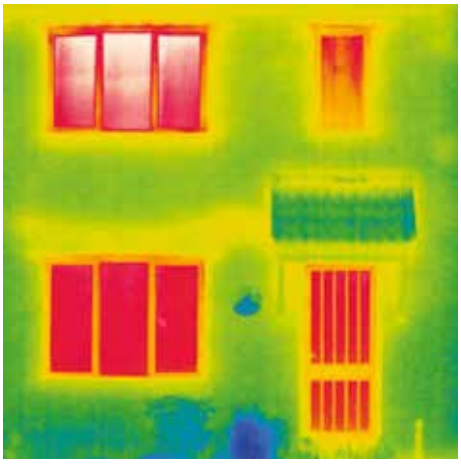

†Source: 1 Tonne of CO_2: What Does it Look Like? | Crown Oil also Source: Distance London → Greece - Air line, driving route, midpoint.

The heat loss you don't see but your wallet does

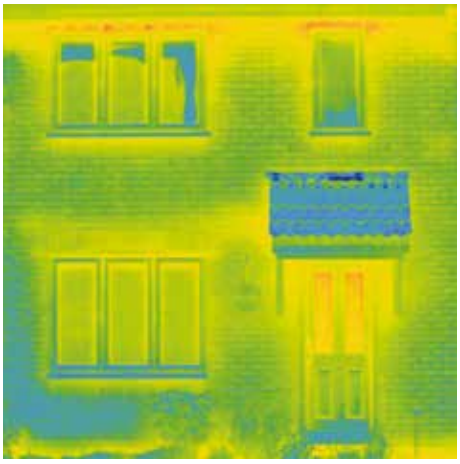

The thermal images of the house in our pictures illustrate the heat loss through the building envelope. The 'before' and 'after' images are striking. The red areas show heat loss, which, with the single glazed windows and doors, is enormous.

After the installation, the difference, though, is obvious. The red hot spots of energy loss are all but eliminated, resulting in a warmer, more energy efficient home that is also cheaper to run.

Before

After

*Please refer to website for the full case study.

Window performance...
perfected for each room

A rated double glazed
Great all-round performance

A rated is the standard* specification on our PVC-U Stormproof and wooden casements, PVC-U sliding sash and tilt & turn windows. The superb A rated windows retain more precious free energy from the sun, actively helping to heat your home. In fact, they gain more heat than they lose, saving energy and money on your fuel bills. Building regulations currently require C rated windows as an energy efficient standard. At Anglian, we far and away exceed this, setting the highest standards possible when we improve your home.

A+ rated double glazed
Best for harvesting the sun's free energy

Standard rating for our PVC-U flush casements and optional upgrade for our PVC-U Stormproof Casements. These are the perfect balance of the big three performance factors in energy efficiency – thermal transmittance, solar factor and air leakage – to harvest even more of the sun's free energy. The low iron content in the glass creates an even clearer pane, perfect for south facing elevations where you can maximise solar gain. Thermally optimised enhancements to the frame and glass also results in less heat escaping, a real plus for the energy efficiency of your home.

*Exclusions apply

A+ rated triple glazed

Best for retaining heat in the home

Anglian's A+ rated triple glazed PVC-U window* keeps even more precious heat in your home than ever before. That's because all our triple glazed sealed units are filled as standard with an inert gas, which is a great insulator in narrow cavities and therefore further inhibits the transfer of heat between the glass panes. To maximise the sun's energy, they also feature two panes of Low-E glass and one pane of Low-Iron glass, the invisible metal coating on Low-E glass reflects heat back into your room, helping to make it much warmer and reduce energy bills. The extra layer of glass also provides additional sound proofing and an even greater level of security.

*A+ triple glazed applicable to our PVC-U Stormproof Casement windows

Colours to complement

Complete the look of your windows

We have an excellent range of colours and finishes for your new windows, whichever material you choose.

PVC-U colours available

Depending on the PVC-U window style you choose, you can select from smooth White Knight finish or White Woodgrain, Golden Oak, Dark Woodgrain, Dual Anthracite Grey, Dual Sage Green and Dual Cream, which replicate the grain of real wood. You can add another dimension with our Dual Option: White Knight on the inside and Woodgrain or Anthracite Grey on the outside†.

PVC-U Flush Finish Casements colours available

Choose from the very popular Heritage White, a range of traditional colours or authentic looking woodgrains for a lovely textured look to both sides of the window. The Tudor option replicates the classic black and white look; offering a white sash with black frames and sill. Sills can also be selected in contrasting colours.

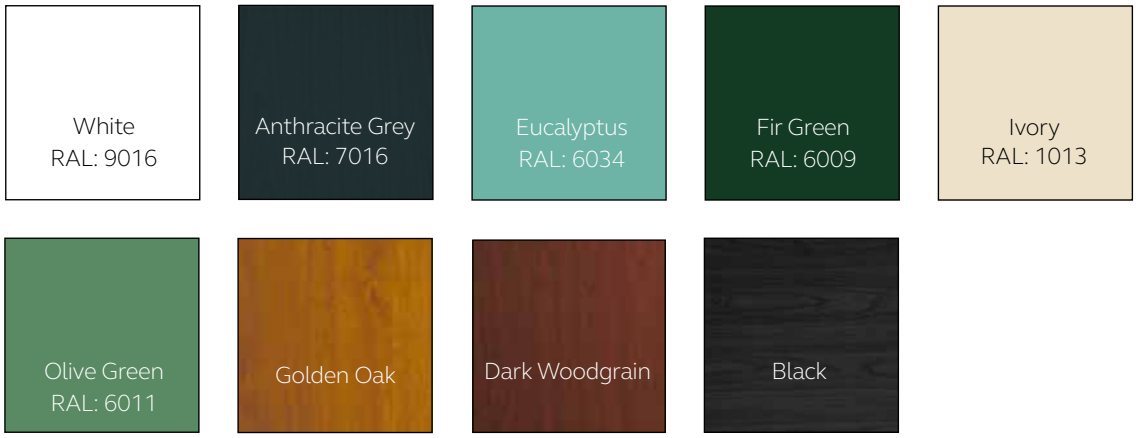

Colours are for indication only, the printing process is not colour accurate. We therefore advise that you see a physical example before choosing your finish.
†Our A+ rated double glazed Casement and A rated double glazed Tilt & Turn windows are available in white, white woodgrain and dual cream.
The Elite sliding sash window is only available in White Woodgrain and Cream (not dual).

Colours to complement

Heritage colours available

Heritage
TIMBER COLLECTION

Heritage wooden windows are supplied in a range of attractive state-of-the-art, expertly applied paint and stain finishes. With our Dual Option, you can even have different finishes on the inside and outside of the window.

Stained finishes (Golden Oak & Dark Woodgrain-Hardwood only)

Aluminium colours available

Aluminium windows are all supplied with a long lasting powder coated finish to BS4873. Standard colours are shown below, but you can choose from the whole range of RAL colours.
Our Dual Option is also complemented by split colours – one colour for the frame and another for the casement.

Colours are for indication only, the printing process is not colour accurate. We therefore advise that you see a physical example before choosing your finish. Due to differences between Aluminium and PVC-U we cannot guarantee an exact colour match between products.

Secondary Glazing colours available

Secondary glazing can be supplied to you in a choice of white powder coated or bronze anodised. White is ideally suited to painted windows, while the bronze anodised finish has a discreet appearance that matches well with stained or coloured windows.

White Power coated

Bronze anodised

Not seen your favourite colour...?

The choice of colours doesn't stop there! As well as all the standard colours, for a little extra we can match any RAL colour and finish your Aluminium and Timber windows in a superb, long lasting coating. It's totally individual to you.

Colours are for indication only, the printing process is not colour accurate. We therefore advise that you see a physical example before choosing your finish. Due to differences between Aluminium and PVC-U we cannot guarantee an exact colour match between products.

Helping you feel safe...

is our number one priority

Advanced safety and security features for maximum peace of mind are an integral aspect in the design and construction of every Anglian product.

Whichever window style you choose in whichever material, we have designed them to withstand forced entry by the opportunist thief with a range of tried and tested, high security features.

Unless you specify otherwise, all windows are fitted with key lockable handles. On our PVC-U casement windows, for instance, these operate highly efficient shoot bolts passing through the strong steel keeper plates and into the frame in at least two points, which gives extra security against forced entry and helps keep the casement closed firmly into the frame.

Our PVC-U windows are also internally glazed and beaded, which makes it difficult for the glass unit to be prised out from the outside.

The extra layer of glass in our A+ rated triple glazed windows also brings enhanced security and safety to your home further preventing opportunist thieves from breaking through your glass.

In locations where the building regulations require, we can also fit fire egress hinges and toughened glass for security and safety.

If you have any concerns about security or would like further details on our security features and additional options on your chosen window style, just ask us.

Advanced safety and security features are an integral aspect of the design and construction of every Anglian product.

This page shows the security features of an Anglian PVC-U Stormproof Casement window.

Shoot bolt locks

High security steel shoot bolts lock into the frame at two points.

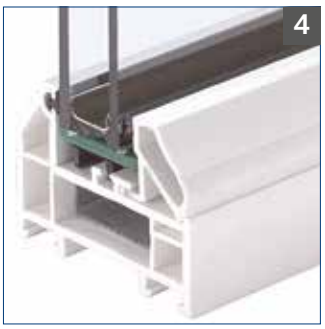

Excluder device

High security anti-jemmy device resists forcing.

Key locking handles

Key locking security handles are fitted as standard.

Strong construction

Robust multi-chambered PVC-U construction with welded joints for added strength.

Internal glazing

By internally fitting the beading it means the glass cannot be removed from the outside. This makes your windows more secure.

Ventilation

Trickle vents provide the required Building Regulation standard for continuous ventilation.

Toughened glass

Where legally required Anglian fit safety glass as standard. If broken it will disintegrate into small granular pieces.

Hand crafted so you can choose exactly the style and look you want. We manage the whole process from start to finish.

Glazing...
that is simply amaz ing

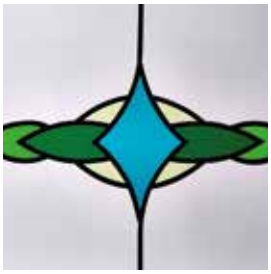

If you can imagine it, we can almost certainly create it! That's because we fashion all our decorative glazing effects by hand. Our team of craftsmen will produce new glazing designs and effects for you or faithfully replicate any existing patterns on your house.

Really, the only limit to the glazing effects we can create for you is your imagination. In fact, our decorative glass options provide you with almost an infinite number of designs and styles to choose from. We'll even etch your house name or number in glass. How's that for individuality?

Please request the Anglian Decorative Glass brochure for our full range of glazing effects.

Glazing styles

Etched

Etched glass is a range of designs suitable for areas where a degree of privacy is required. The subtlety of etched glass looks understated and offers both contemporary and traditional designs. This glazing style is available in both our double and triple glazed windows.

Etched glass options

One of the first steps in choosing decorative glass is to decide whether you want to enhance the beautiful view outside, or create a stylish way to prevent the outside world from looking in. Before you pick the overall design, select the appropriate obscurity level based on where the glass will be located and what you're looking to achieve.

Glass styles

Positive: The pattern is sandblasted onto clear glass, but the windows are mainly transparent.

Ideal for: Windows and conservatory windows with a view.

Negative: The background is sandblasted onto clear glass, the design is the only transparent area.

Ideal for: Windows without views e.g. looking out to a wall or fence.

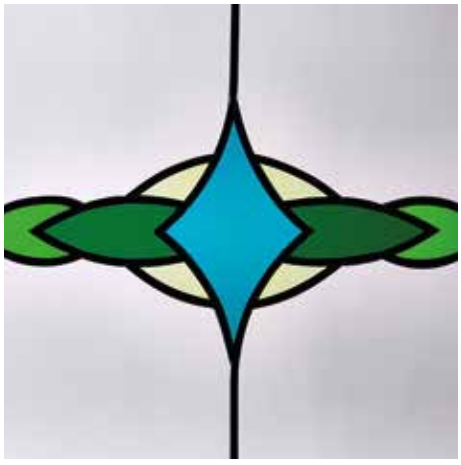

Silver Mist: The pattern is sandblasted onto Silver Mist glass, to give you full privacy.

Ideal for: Bathroom windows.

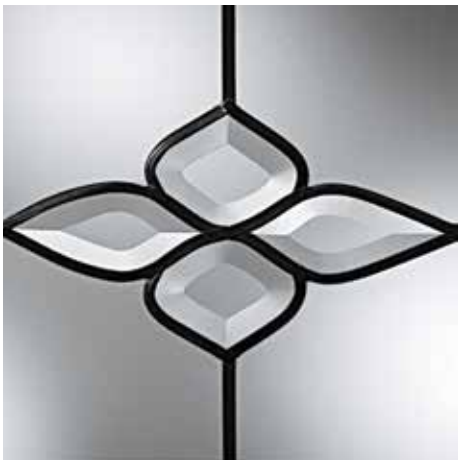

Coloured

Coloured glass is often used to create a traditional stained glass window effect. It's stunning when added to a simple, standalone design, or it can make a real impact when the design is run across a series of panes, such as in a conservatory or around a bay window.

Bevelled

Bevelled glass designs manage to look both modern and classic at the same time. They're just right for adding a sophisticated 'architectural' look and are equally beautiful when kept clear and neutral, or when they're used to inject some subtle colour.

Brilliant Cut

Brilliant cut creates crisp, clean lines for a subtle yet sophisticated effect which still allows plenty of light to flood in. The diamond cut provides a stylish alternative to traditional diamond leading or you could welcome the sun into your home by adding a classic sunburst design to an arched window or a Regency gable end conservatory.

Glazing styles

Fusion

Fusion designs are a mixture of stained glass tiles, with polished edges and connected by sandblasted lines. They're like works of art in themselves and look simply dazzling when used as a colourful centrepiece or as a focal point within a fanlight window.

Obscure

Our standard obscure glass is the cool and chic Silver Mist, a beautiful, flat finish that is highly opaque for outstanding levels of privacy. Complementing Silver Mist are ten stylish designs of textured opaque glass that are perfect for bathrooms, toilets or in rooms that are overlooked, but where you want as much light as possible.

Making a mark

The finer points are important

All our products are manufactured to the relevant British Standards and where possible seek approvals from rigorous third party bodies – not every company does this - ensuring that our products meet the very highest of industry standards always.

We also take our guarantees seriously, with a full 10 years guarantee for PVC-U and Aluminium. Up to 10 years for Wooden* products and 15 years on all our Ultra gas filled sealed units.

*Exclusions apply

*Exclusions apply.

Making it happen

Your project takes shape

Every Anglian window is made especially for you and the process starts when you contact us on 0800 298 4954 or call in to one of our nationwide network of showrooms.

At Anglian, we take quality seriously: and that's not only in the way we make everything, but also in how we look after you to ensure the windows you order are made, delivered and then installed exactly how you want them to be.

We'll come to your home and measure up every single window individually so you get a window that is exactly the right size. Our advisor will then help you pick the design you want.

There's then the choice of options, like colour and finish, the ironmongery plus of course the glass.

Only then do we make your windows, not standard, but constructed exactly to your specifications, for your home.

When we come to fit your windows, you'll find our installers are friendly, helpful, tidy and most of all completely dedicated to doing a highly professional job with which you will be delighted and completely satisfied.

1

Care is taken when removing your existing windows to ensure that the surrounds are not damaged.

2

Once the reveal has been cleared, the outer sill is bedded in and securely fixed.

3

For added security, all our PVC-U windows are glazed from the inside.

4

Before final fixing, products are tested to ensure they operate correctly.

5

The window is then finally weatherproofed using a silicone sealant.

6

Making good is always the sign of craftsmanship, the finished result reflecting the higher standards of the market leader.
