4. Proposed Demolition Works

Please describe the building(s) to be demolished

Open sided barn and steel frame agricultural buildings.

Please state the reasons why demolition needs to take place

The buildings are currently disused and subject to redevelopment proposals for the New Monks Farm allocation. In the mean time they present a health and safety, and security risk due to potential for break ins, vandalism and squatters. Therefore demolition is required in order to ensure safety for adjoining users.

Please describe the proposed method of demolition

The demolition process will follow a structured manner (1) checks for birds/bats will be carried out by a suitably qualified ecologist (2) the handling and removal of asbestos will be carried out by specialist contractor (3) a manual soft strip of fittings, fittings and equipment will take place (4) the buildings will be demolished using an excavator with grab attachment. The steel frame of the barn will be cut using oxy-acetylene torches in a top-down sequence.

How and where would spoil/rubble be disposed of?

Any items suitable for recycling will be transported to specialist recycling plants i.e: steel, wood, glass. Any materials that can be crushed will be retained on site for re-use. Anything that cannot be recycled will be segregated and transported to licensed waste disposal sites. Disposal sites and recycling centres will be sourced locally where possible to minimise the miles that the waste needs to be transported.

Please provide details of the proposed restoration of the site

4. Proposed Demolition Works

Buildings will be demolished down to ground floor level to make them safe at this stage. The ground floor slabs will be left in place once everything else is segregated and removed. Land remediation will be in accordance with proposals for New Monks Farm allocation.
