For attention Peter Barnet

Ref our recent tel conversation re the ongoing building works at no 44 Brighton rd.
Whilst we understand the plans for the wall built one meter from our boundary fence down half the length of the garden, have been approved, I am sending photographs of the impact it has had on our garden environment. I would like to draw your attention to the height of the wall from the ground level on this side of the wall. Obviously the ground level has been lifted on the other side to comply with regulations!
Additionally we now have the situation where the planter ground level is now at the top of our 2 meter high fence. This is being walked on with a loss of privacy on our side. At one point this wall has 24 100 ml concrete blocks from the ground level on this side.
We believe this should be reduced in height to be more in line with the original ground levels of the properties adjacent.
We are having to re build our fence as it has been destabilised by the digging works.

We would also like to request a specific height for the wall being requested on the latest planning application. The height quoted should be from the ground level of the current planter and show the the height of the wall in relation to the underneath of the upper balcony.
We feel we are gradually being enclosed by concrete.
Regards
Mr ans Mrs Walker
