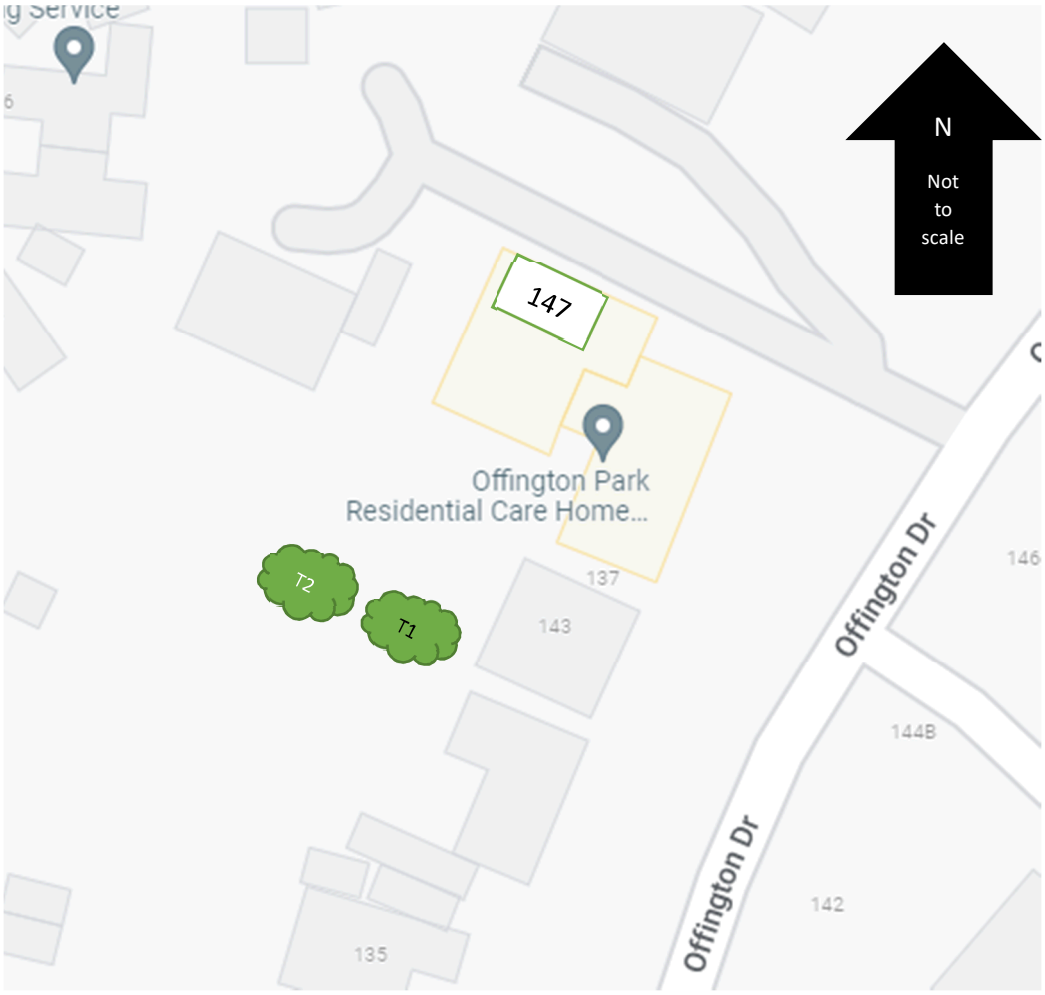
147 Offington Drive, Worthing, West Sussex, BN14 9PU



T1 is a Tilia approximately 14m tall. T2 is an Acer approximately 14m tall.

Both have historically been pollarded at around 9m, with all pollard heads being at slightly differing heights, with an inconsistent variance of up to 1.5m

The suggested works will reset the pollards at approximately 1m lower than the current tallest pollard heads, to better reshape the overall scaffold form of the trees, to leave them with a higher amenity value, and continuing the ongoing maintenance program, to keep them at a size suitable for their location, overlooking the rear garden of several private residences.
