DATE RECEIVED 31 AUG 201

Waste Minimization Statement **13th August 2010**

- Any excavated materials will, wherever possible, be reused on site. Materials that can't be reused will be disposed of by a Recycling Contractor. (Any asbestos uncovered as part of the building works, to be removed to a specialist tip and certification provided).
- Contractor to ensure site is secure to prevent damage, disbursement of materials which will then need to be replaced.
- Dedicated material recycling skips will be used by the contractor during the construction.
- During construction the Contractor will ensure the correct amount of building materials are ordered, therefore, reducing the amount of waste from unused materials.
- Space on site will be allocated for the storage of waste materials to enable reuse at a later stage, or, they will be stock piled until there is a full lorry load for recycling.
- Timber packaging will be segregated on site and standard size pallets will be returned or collected by a Specialist Contractor.
- The Contractor will strive to reduce water consumption during the construction of the project with Grey water recycled where possible.
- All aggregate not used during the construction will be recycled.
- All materials will be securely stored so as to avoid being blown away.
