SAINT-GOBAIN

Weber welcome you to our world of colour and expression

Colour, form and texture are the basic tools specifiers have at their disposal to create an attractive façade. Where the specifier requires colours that are outside the technical possibilities of cementitious materials, modern base coat renders in conjunction with high performance synthetic coatings are available to fit the bill with the same durability.

Synthetic Finish Product Range

- **weber.plast TF** - A pre-mixed, acrylic-based, even-textured finish available in 1.5mm aggregate size
- **weber.sil TF** - A pre-mixed, silicone-based, even-textured finish available in 1.5mm aggregate size
- **weber.sil P** - A silicone resin emulsion paint

Guidance For Successful Colour & Product Selection

Colour appearance will vary naturally according to product nature, substrate, surface finish and orientation. In particular, cementitious and synthetic product colours are fundamentally different in composition and hence finished appearance. There is no guarantee that the colour will be exactly the same from product to product and in particular, between mineral renders and synthetic products.

It is an unrealistic expectation that manufacturers can produce exact colour matching from:

- **Product to product**
  The raw materials and pigment additions used to manufacture acrylic products are different from those used in silicone based products.
- **Finish to finish**
  The colour of a painted finish on a plain faced render will always look different to the same colour with a 1.5mm textured finish.

To ensure product and colour acceptability, samples showing colour and texture must be requested every time. These are freely and readily available from **Weber**.

Good Practice

To ensure colour consistency, the material required for complete and adjoining panels should be thoroughly mixed together before use.

Always follow the instructions on the product packaging or product data sheet. Product data sheets are available upon request from **Weber** or can be downloaded online at **www.netweber.co.uk.**

Colour Simulator Tools

Colour can have an amazing aesthetic affect to a property and surrounding area, choosing the right one can take some time. The **Weber** Façade Colour Simulator allows construction professionals and property owners to create a realistic impression of a building in a single colour, or in combinations of colours, in a matter of minutes.

IE Weber app

Use the QR code opposite to download the IE Weber App

UK Weber App

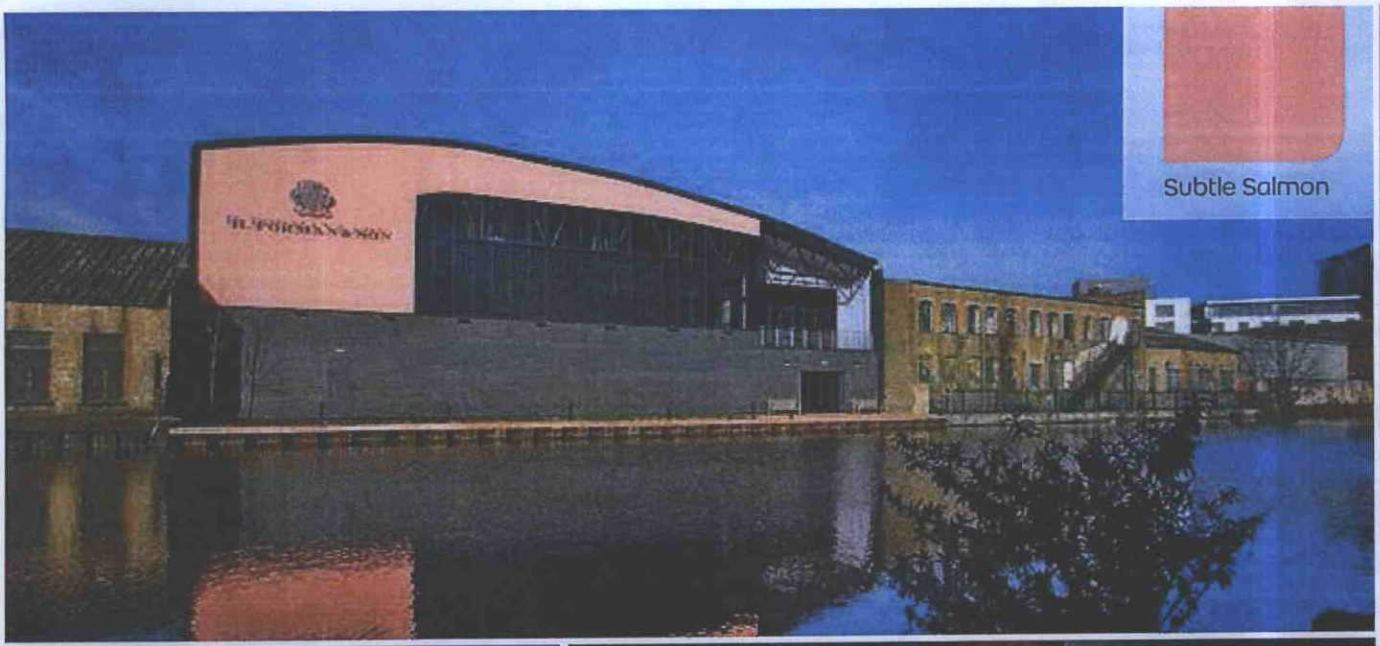

Use the QR code opposite to download the UK Weber App

Visit **www.netweber.co.uk** and select the Colour Simulator tab, upload an image of the specific building or project, and by following the simple prompts it is easy to experiment with colours to create the perfect scheme.

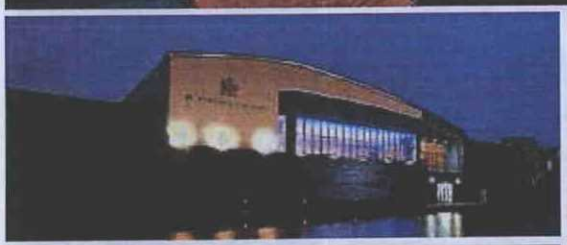

Alternatively you can access a library of standard building images through the website or **weber.app** to create a digital overlay. Building types include a school, commercial property, a high rise apartment block, terraced and detached houses and a variety of non-traditional housing types such as BISF, Airey and Cornish.

Client: H. Forman & Son
Architect: Phil Hudson
Contractor: Phelans Construction
Applicator: Repex Ltd
System: **weber.therm XM** EWI

H. Forman & Son are 4th generation family owned salmon smokers. Their eye-catching headquarters was designed by award-winning architect, Phil Hudson, in the shape of a 'darne' of salmon, with 'scales' tiling the roof. In line with their goal for sustainability, the new building has been built to the highest standards to keep their carbon footprint low including the use of **weber.therm XM** EWI system.

Finished in a Subtle Salmon, the building integrates high levels of design, performance and sustainability.
