Planning application to replace an existing window

Please accept the below as my application to acquire planning permission to replace an old perishing and dangerous window.

We are currently experiencing large amounts of water damage to the flat below and are urgently needing to replace the existing window. The replacement will be as close to the previous only allowing for modernisation and minor differences and a difference in panel size to allow for easy access and installation.

The current window has a door either side, one of which(the right hand side, has a permanent lock and is a hazard and inappropriate for its position. The new window will not have a door on the right hand side.

Cosmetically the window will be the same, white PVC.

Below is a picture of the existing window, followed by drawings of old, and new proposed windows
