Amendment to garage to depth and with of garage/store

Dear Sirs

With regards to the application of increasing the size of the building I would like to make it aware that this has already been increased in size and as I can now see what it looks like, I am appealing against the application as the concrete block brickwork is an eyesore to look at direct from my lounge window as we are directly opposite the building. I have attached photographs of this to prove my case.
I have looked through the amended documents and can see no drawing or information to suggest that this is going to be rendered or the fencing replaced to make it presentable to look at on the north east side which is the boundary with Orchard Close, it only indicates the north west side. This I believe was stated in the first application prior to the recent application that the fence was to be repaired and replaced and that brickwork was to be used on all sides. I have also noticed that the drainage from the flat roof only runs onto an accessible public dirt footbath and not into a soakaway as submitted in previous plans. This therefore would make the area inaccessible for persons who use the path when it rains as this would be flooded due to the vast quantity of water running off the increased roof area.

Yours Faithfully

John Upward
