AWDM/0082/23

Development Site East Of 2 Waterside Road Southwick West Sussex

I refer to the above application copied to us and apologise for the delayed response.

The Noise Impact Assessment produced by WBM Acoustic Consultants concluded that the site can operate with extended hours within environmentally acceptable noise levels. This is despite their BS4142 assessment suggesting the specific noise levels produced by the activities will be higher than the monitored LA90 background noise levels. Having said this the specific noise is less than the monitored ambient noise at nearby residential properties.

The impact on residents in the Brighton & Hove City Council (BHCC) area may be greater as they have less natural barriers between the source of the noise and are closer to the operations. The specific noise at the BHCC properties is much nearer to the monitored ambient noise levels.

Therefore I recommend that if permission is granted this is done so on a temporary basis so that the impacts can be monitored. However comments from BHCC should also be considered before making a final decision.
