**Planning Application for alterations to existing vehicular crossover at 49 Goring Road, Worthing. BN12 4AX**

**Supporting Statement.**

Problems with existing crossover.

The existing crossover is 2.5m wide, with no splay at the junction with the carriageway as per the standard WSCC crossover detail. As a result it is difficult to enter or exit without bumping over the radius kerb or verge. The situation is particularly bad because at times the traffic is very heavy (the A259), and it is necessary to make a quick entry or exit between the traffic.

The Proposal

The crossover will be altered as far as possible to align with the standard WSCC layout. This is however restricted by the existing street lighting column. The proposal therefore provides splays, but maintains a clearance of one metre from the lighting column (as per standard WSCC guidance).

This will clearly be a vast improvement on the existing situation.
