PLANNING SERVICES

AWDM/1840/15

Please can I bring to your attention some information relating to this for your consideration in your decision making.

The nursery are artificially minimising the current traffic and parking problems by getting all staff to park in a side road (adur road as an example). Normally these 7-10 staff cars and service vans park near the nursery. Removing these during this period of a planning application will mean it is **impossible to assess the impact** of this increase as there are suddenly many more parking spaces near the nursery, reducing the normally present issues and chaos. The nursery are supposed to have a travel plan, is this being followed as it should be?

There has clearly been a coordinated plan by the nursery to drive up support for this planning application and I would encourage you to see that for what it is. All letters follow the same format, many are staff and many are "looking to move to shoreham". There is a regular turnover of children and there are other nurserys in shoreham too.

This is a private business, and I urge you to not put their profits above the amenity and safety of residents, road users and children. Childcare provision is important, and if there is a need in shoreham then why don't they set up another nursery (this chain has 5 or more already). Should you approve this, **what happens when these spaces are full, then what, another planning application?**

When making a decision on this I hope you consider the above, but most importantly you simply won't be able to assess the issues of any extra traffic. When an accident occurs on that road with a child (and it will be a serious one) you were given warnings, and you need to decide on that basis if an even bigger nursery is worth that.

Thank you
