TPO SAFETY TREE WORKS

T2 (As marked on TPO map) NORWAY MAPLE TREE *(Acer pseudoplatanus):* This large specimen tree is growing well but is rather asymmetric with excessive and unbalanced growth towards the South and South South West sectors. Furthermore, the leaning boughs are leaning towards the property and are a potential risk. It is now in need of sympathetic arboriculture to regain a more manageable and appropriate size for the location.

The following sympathetic tree surgery is recommended:

- Reduce crown height and radial spread by up to 1.5m on the two main stems that are in the S/SSW sector.
- Removal of significant deadwood.
