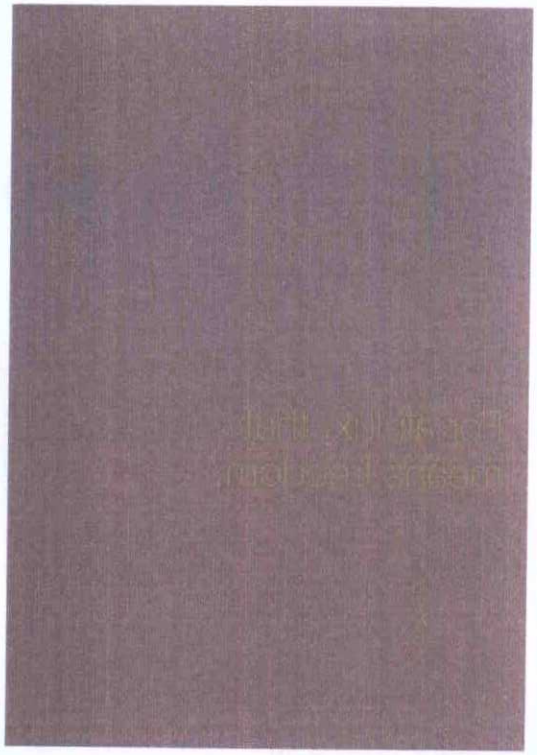
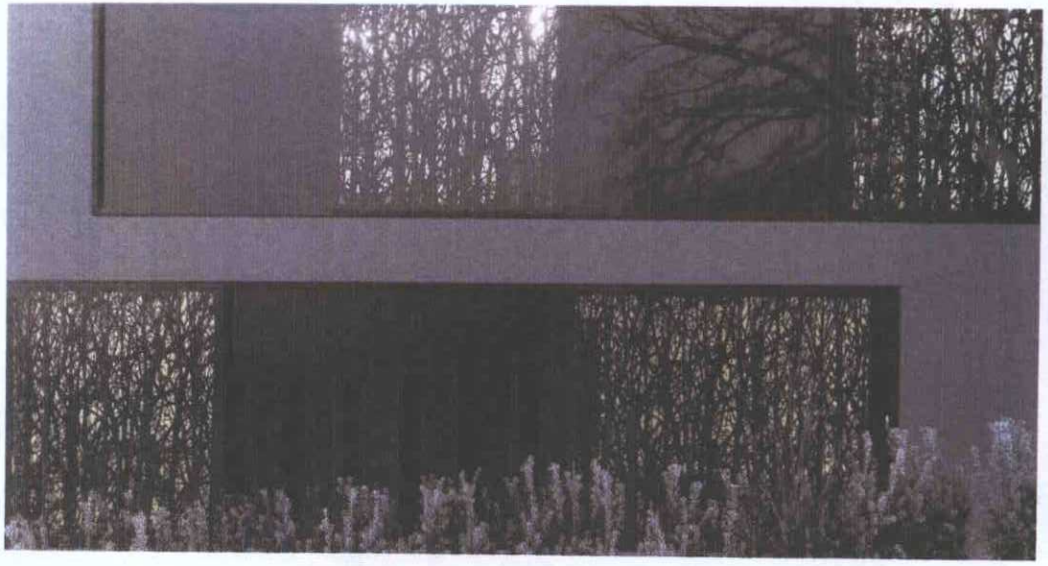
The window.

Open space.



Experience the limitless view. Enjoy architectural freedom. With an optimum of safety and comfort.

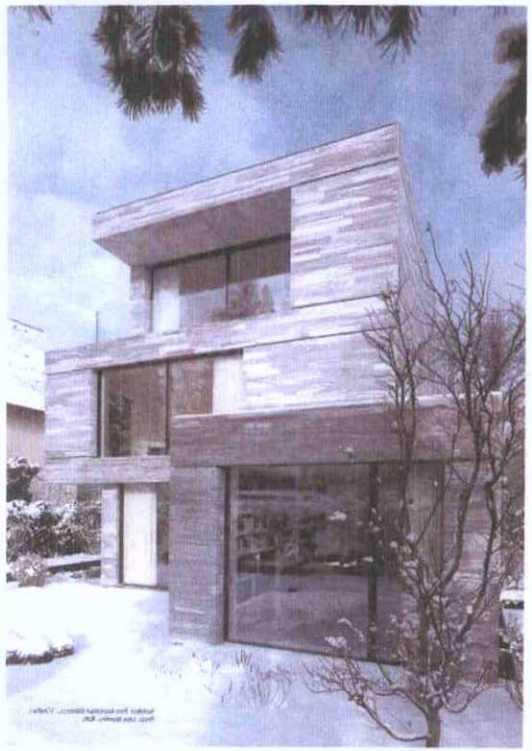


air-lux

air-lux – the only sliding window system worldwide with the pneumatic seal. And, of course, Swiss Made.

The classic for a modern glazing system with generously sized sliding panes to meet architectural, aesthetic and building physics requirements for the development of an entirely new technical solution.

The name testifies to make the sliding frame – system up to sizes of 12 m².



The idea of exclusivity and individuality takes on a new dimension with the air-lux system. The air-lux system opens up possibilities for architects and developers to realise their individual concepts and ideas – and in a house as well as in a multi-storey facade.

Sliding panes of up to 18 m² surface area, as well as special fittings for opening external and internal cornerings – all in whole pane glazing. If desired – provide limitless freedom of design and set architectural standards.

air-lux.

The details of the air-tex system as installed at Tunc-
bridge and London. Even in the smallest room (shelter
above), the ability to use fully automatic operation
with the motorised panel between the automatic valves
(these are shown in the open position) at the
ends of operation is provided by the automatic valves
and the motorised panel between the automatic valves
(these are shown in the open position) at the

and the motorised panel between the automatic valves

air-tex – in all respects,
a suite value.

air-tex also provides a robust system of construction
to make increased security doors or tux can adjust
to a wide range of future systems to accommodate
changes in technology.

Discreetly automated systems in conjunction with
security glass, burglar alarm linked to access door
locks and closed circuit television are also
available to provide the highest degree of
protection for business premises. Glass
doors and panels, however, can be tempered
where required to provide adequate protection
for people in the event of breakage.

air-lux and Krapf – a dependable combination.

air-lux is the product of 30 years' experience in up-market facade construction in metal and glass.
The sliding pane system was developed by the renowned metalwork specialist Krapf Company Ltd. to meet high architectural demands and the requirements of leading architects.
The air-lux sliding windows are manufactured in Switzerland from high-grade aluminium profiles.
The processing of the robust, tilgree frames meets the highest design and manufacturing standards.

Krapf's fitting team takes care of the professional installation of the window systems. Architects and developers thus have only one contact person, as the planning, manufacture and fitting come from a single supplier.

air-lux means perfection – from the planning through the manufacturing to the final fitting and installation stages.

Behind the air-lux system stands 30 years of experience and comprehensive in facade construction, research and development, manufacture and fitting – all from one supplier.
air-lux will provide back-up support even at the planning stage for architects and developers, and bring its entire know-how to bear in the development of well through-through solutions.
air-lux can also call on the services of experienced building planners, building engineers, architects, specialist planners and structural engineers.

Enjoy the privilege of
a limitless view.
