REQUIRED TREE WORKS - 2025

Field Maple (T2) - red outline indicates approx. area for reduction of crown (approx. 3m south facing and 4m north facing) and radial spread. Plus, the removal of epicormic shoots where appropriate e.g. beside the back gate to 15 Hillside Avenue and alongside the bridleway verge. The 2nd photo on the right was taken (from the public bridleway) by tree surgeon, Jon Thwaite, indicating how much he thought the crown height could be reduced without spoiling the look of the tree.

Holly (T1) – removal of Holly tree as indicated by the red outline below. This was discussed with a tree surgeon , Jon Thwaite and he did not believe this would adversely affect the amenity value of the bridleway.

Holly (T1) continued – the red arrows below indicate the numerous Holly shoots growing around the trunk of the tree. Normally we cut these back every year. But we are now pensioners and getting too old to crawl underneath shrubbery to cut these back. Plus, we have enough gardening work to do to keep our garden looking tidy! If these holly shoots were left un-attended they will grow into trees and interfere with the growth of the Field Maple next to it, forcing it to lean even more over the bridleway.
