The side windows of our flat faces this lighting directly which is very bright especially in winter when it is darker. The signage and lighting cover the whole south side and front of the building apart from the windows which is disproportionate to the need or role of advertising ones business and is significantly lighter than any lighting nearby. The business is not open outside of normal business our so it's not necessary to help locate it for someone not aware of where it is. It's over the top for what is needed.

It causes light pollution into ours and local properties and is disturbing at night.

Thank you.
