NEW WINDOW DETAIL - SHEET 1 - SCALE 1:10

EXTERNAL ELEVATION

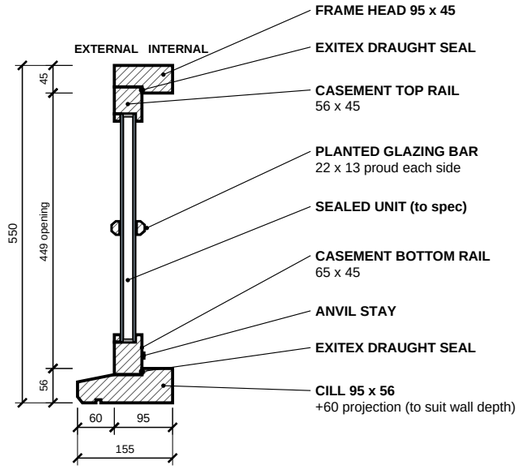

Scale 1:10

Single casement, side hung, outward opening (dashed swing lines, hinged right in this external view). Catch on left stile; stay on bottom rail. Painted white.

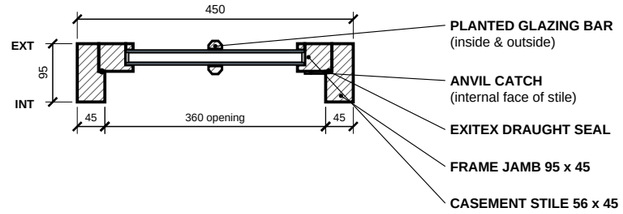

SECTION A-A (VERTICAL)

Scale 1:10 - through casement centre

SECTION B-B (HORIZONTAL)

Scale 1:10 - through glazing panes

SPECIFICATION AND NOTES

1. Handcrafted solid hardwood single casement window, traditional Georgian style to match windows on same elevations. Painted white.
2. European oak window, overall 450 wide x 550 high x 95 deep. No central mullion.
3. Fitted with Exitex draught seals and Anvil catches.
4. External frame section sizes: head and sides 95 x 45; cill 95 x 56 (front of cill extends 60 on top of the 95 depth = 155).
5. Window (casement) section sizes: head and sides 56 x 45; bottom rail 56 x 65 (65 high x 45 thick).
6. Four panes formed by 13mm planted-on glazing bars, inside and out (22 wide, 13 proud, 2mm spacer each face).
7. All sizes are before sanding and are therefore approximate.
8. Constructed using traditional joinery methods, complimentary to listed buildings. All joints are through mortice and tenon.
9. Each section of timber is machined from a single piece of oak. Made from character grade European oak.
10. Only exception: the front of the cill extends 60 due to the depth of the wall.

A. Casement opens outward, closing into a 10 deep rebate in the frame (Exitex seal in rebate shoulder).

B. Sealed unit assumed 24 thick (e.g. 4-16-4) set mid-thickness, with external glazing bead; type and thickness to specification.

C. Handing taken from sample photos: catch on right and hinges on left viewed from inside (so reversed in the external elevation).

D. Bar profile indicative, taken from sample photo. Stay position indicative. Cill weathering and drip groove indicative.
