

All the requested works are for general upkeep and maintenance of the site and to maintain the trees at a smaller size for their location.

None of the works would be detrimental nor affect their amenity values

T1: At present, tree stands approximately 14m tall with a 4.5m crown width at furthest point and from crown centre. After requested works there would be a residual height of 11m and a 2 to 2.3m crown width from centre.

T2: At present, tree stands approximately 12.5m tall with a 4m crown width at furthest point and from crown centre. After requested works there would be a residual height of 10.5m (my specification says ‘’up to 3m height’’. It’ll be more like 2m.) and a 2.5m crown width from centre.

T3: At present, tree stands approximately 11m tall with a 2.2m crown width at furthest point and from crown centre. After requested works there would be a residual height of 9.5m and a 1.5m crown width from centre.

T4: At present, tree stands approximately 13m tall with a 4m crown width at furthest point and from crown centre. After requested works there would be a residual height of 10m and a 2 to 2.5m crown width from centre.

T5: At present, tree stands approximately 11.5m tall with a 4m crown width at furthest point and from crown centre. After requested works there would be a residual height of 9m and a 2 to 2.5m crown width from centre.
