Seaside House – Drainage and Surfacing Review

Introduction

Hamson Barron Smith (HBS) have been commissioned to provide design input into the proposals at Seaside House, West Sussex.

Surfacing

Proposals seek to change the existing flag stone paving surrounding the existing buildings to an alternative resin bound surfacing.

Drainage

The proposed change to the surfacing will not affect the surface water drainage in anyway. However, proposals seek to remove some existing Linear Drainage Channels and replace them with newer equivalent alternatives for servicing and maintenance purposes.
