Sycamore T1 of first schedule, TPO order no: 55 of 1995

Our client has recieved an "Obstruction to street lighting and illuminated signs notice" (included in the application) My suggestion would be to remove the West facing limb entirely, effectivly crown raising this side of the tree. If this is deemed to be too severe then only to remove the smaller limbs where they split into two seperate limbs/branches 2m up the main West facing large limb.(please refer to picture 1) Reasons for this is to allow light penertration to the corner of gratwicke Rd, abiding to the council obstruction notice given. Also an overall 2m reduction of the tree to reshape the crown leaving a natural form where most of the growth is South & West facing. Including some over extended growth and to clear the building on the inside.

Reduce South side by up to 3m in places mainly 2.5m where the growth has extended over the garden of no; 68 Gratwicke Rd.(Please refer to picture 2)

West facing side outer large limb removed or reduced to allow the street light to illuminate the pavement & road at the north end of Gratwicke Rd. Also to make a reduction of up to 3m in places or 2m if the large limb was to be removed where most of the growth has accured since the last authorised reduction, with a couple of extended laterals stretching over the road side.

Reduce North facing side by 1.5/2m which is a little restricted by the Bay trees within G1 of the first schedule.

Reduce East side by up to 2m keeping a natural form (crown shape) and clearing the building on the inside by 2m.

Bay tree within G1 of the first schedual, TPO order no: 55 of 1995

To reduce the West side lower limbs 2m from the main stems lifting the Bay tree above the one way sign on the corner of Gratwicke Rd. Creating a radius of 1.6m around the light/sign this is to prevent a further "obstruction to street lighting notice" in the near future.(Please refer to pictures 3 & 4)
