

South facing elevation as Existing

The back of the proposed development would be 1.900mm from the back of the existing building and is faced with a planter wall to give a green aspect from the existing building (No65). The rear of the proposed development has a lower roof and the line on the elevation drawing depicts the building control compliant angle to show that there is no blocking of light. Until recently, a tree located on the site previously substantially blocked the light to this window, so the situation could be seen as an improvement on any previous perceived over-shadowing. Both buildings would be in the same ownership.
