ADDITIONAL

3 Amla Road, Worthing, BN15 8AX

Front dormer appears approx. a third up the roof, with the ridge of the dormer almost to the apex of the main roof.

The proposed aims to create a better functional space by providing better headroom to the first floor and to the loft room by raising the existing ridge height and having dormers to allow light and minimal bedroom furniture.

The proposed dormer to the front, is as existing (previously agreed) with the rear dormers being dramatically reduced in scale and size. The rear dormers step back 875mm which far exceeds PD requirements.

There are currently existing dormers to the rear of several properties that sit higher than the proposed.
