To whom it may concern,

I would like to urge you to consider that the decibell rating for noise polution is based on the fact that houses have 12" think walls but our boats are thin ply wood and that sound travels through them far more that a normal house.

This means that the internal noise can even be louder than outside!

Also we don't have garden walls so we now have to sit in our boats instead of on our deckings. We have been reduced to hermits in thin walls. Even when the noise is low the constant bass in such small environments is quite a distraction.

I realy urge you to base any udgements on the babis that these are not normal dwellings and ask yourself- could you live in a wooden box next tthat constant noise?

I would really like this to be seen as an important consideration when deciding whether or not to grant permission for a Disco less than 8 feet away from our dwellings.

Thank you

Mike Edwards
