Having problems this week accessing the Planning Application for the above project and now see you have a hiccup with it too.

I want to register please my abSolute suprise and

astonishment in regards to building project as above for the Car Port with a Solar Roof.

Along Warwick Place we are mostly Grade 2 listed properties and we are part of the Conservation area which 20 yrs back was under the Steyne Gardens Conservation Project.

I cannot imagine anything further from reality than seeing the proposal. This is a futuristic design . More modern than modern and with solar panel roof. We are not allowed solar panels for our properties thankfully.

Over the years I have allocated almost all my money into my property sacrificing many things others don't think twice about doing.

I was always told by Conservation experts that owners of such a property are only caretakers as our freedom of choice is restricted as to what we wish to do .

We have a Listing so as to preserve as much social history as possible.

This car port hub is utterly out of keeping with properties along here. And the feeling amongst neighbours is pretty unanimous.i sincerely trust the meaning of Grade 2 Listed is brought to the forefront as it currently is making a mockery of the title.

Thank You.

Susan Samios
