

Guidance on how vegetation should be cut back

1. Remove or shorten branches interfering with street lighting to permit unobstructed illumination of the carriageway and footway to prevent any obstruction of lighting columns. Lamp to be visible from centre point between columns. Clearance to be sufficient to be effective for at least 12 months.
2. Work to conform to BS 3998: 2010, all arisings to be removed from site.

NB: Trees and shrubs should be cleared to at least 1.6m above the column and back behind the lines of the columns
