Wheel cleaning facility statement

In order to minimise the spread of mud, dust and dirt, both on and off site, a temporary water stand pipe will be installed for the cleaning of wheels and vehicle bodies.

This installation will include hand held washing equipment for additional cleaning as required.

The main washing area would be implemented around the site entrance where the access / egress would need to be maintained clear and clean.

Where required road brushes and scrubbing brushes will be used for the cleaning of the road serving as entrance to site.

All contractors working on site will be instructed to reduce the spread of mud / dirt throughout their work.
