RAINWATER GOODS

Visible goods to be from the Lindab galvanised steel range which can be colour-matched to the Greencoat PLX system being used for the dormer

The Metal Roof Company - https://themetalroofcompany.co.uk/lindab-guttering/

The Lindab range of steel rainwater products is one of the most environmentally friendly building products that can be used in rainwater management. Studies of the seven frequently used materials for gutters and downpipes including plastic, zinc, aluminium and cast-iron show that, when considered from raw material extraction to end of life recycling, Galvanized steel is the 'greenest' option.

15-YEAR WARRANTY

The Lindab Rainline range of coated steel gutters and downpipes ensures a 15-year warranty. Lindab's new Magestic range, a product designed to give exceptional performance in aggressive environments such as coastal locations, have a **10-year warranty**. These warranties underpin the high-quality steel used and the usable life of the Lindab Rainline products is far in excess of the warranty available.

SUPER STRENGTH

Lindab gutters are made from high strength steel sourced from top European suppliers. The substrate is a galvanized zinc coating and is finished with a primer coating, and finally a high-build polyester paint that gives colour and added protection. The Lindab Magestic, Natural Copper and Stainless-Steel Vandal Range offer varying degrees of strength and protection. Call our technical team for advice and data sheets.

CHOICE OF 5 GUTTER SIZES

Lindab offers a broad range of gutter and downpipe/drainpipe sizes to suit any property. The narrowest gutter size available is 100mm, a size ideal for small buildings or roofs. The 125m, 150mm, 190mm sizes are available as Lindab half-round gutters. The new Lindab rectangular gutter range comes at a fixed width of 136mm. Want to know what the best gutter size is for your location and property type? Call The Metal Roof Company to discuss the gutter options best suited to your needs.
