Cast Iron Air Bricks

Additional Information

Cast iron air bricks are used either externally or internally, built into walls (either brick or stone) to fit flush with the wall surface and secured in place with mortar or plaster.

9" x 3" (225 x 75mm) air bricks are a very popular size as it is the standard size of an old fashioned British house brick. If air flow is important, again the max flow, as the name suggests is a clear winner.

The 9x6 air bricks are twice the size of a standard house brick, therefore allowing a greater free air flow. The 9x9 and 12x9 air bricks are also available to supply larger air flows.

Round Slotted

Home › Round Slotted Grilles › Round Slotted Vent Grilles

Additional Information

These grilles are used both in domestic properties and commercial buildings for inlet of fresh air and exhaust of stale air.

Outlet grilles are widely used for extracting air from kitchens, bathrooms, cloakroom and dryers and we have seen a large number of property owners replacing plastic, characterless brown vents with something from this range or from our decorative range. These slotted vent plate grilles are available in various sizes and in three shapes, square, round and rectangular. They can be fitted either into the hole in the wall or over the hole, in the latter case a grille larger than the hole size is required and screwed into the brickwork. We supply most round grilles either drilled or undrilled for this purpose.

Our small round grilles can be installed directly into core-drilled holes such as extractor or dryer vents, subject to them meeting the recommended free air flow of the appliance and therefore aren't normally supplied drilled.

MORE GUIDES

Round Slotted Vent Grilles From: £30

Round Slotted Vent Grilles in painted black finish.

These grilles have two functions, either as vents or as drainage grilles. They are especially useful for inserting (rebating) into wooden floors or into wall to provide combustion air for log burning stoves and larger grilles for drainage grating outside.

Look carefully during episodes of ITVs "Emmerdale" and you may catch a glimpse of our round 12" slotted grille in the main street (item RO12)

4, 5 and 6 inch round grilles are often used as vents in conjunction with round ducting

Drilling & mesh can be added for an additional cost, prices vary from £15 – £2[illegible] diameter.
